The graphic equalizer consists of four stages with center frequencies of 250, 600, 1200 and 2400Hz. For example, to increase the high frequency components of a bassy voice, move the 1200 and 2400Hz controls in the + direction.

⑤ Compression Level Switch

Three different values of speech compression can be selected.

HIGH: The compressor amplifier gain is approximately 45dB. Select this position for soft voices or while speaking far away from the microphone. Note that background noise may also be picked up when using this higher gain position.

MED: The compressor amplifier gain is approximately 35dB. This is the normal operating position. Maintain a distance of about 10cm(4 inches) from the microphone while speaking.

LOW: The compressor amplifier gain is approximately 10dB. The compression action is only noticeable while speaking with a loud voice. Normal voice levels do not trigger the compressor.

⑥ PTT Switch

To transmit, push this switch and speak into the microphone. The red LED power indicator blinks while this switch is held down. Release the switch to return to the receive mode.

⑦ Lock Switch

Push this switch once to lock the transmitter in the transmit mode. The red LED power indicator blinks while in the transmit mode. Push the PTT switch to release the lock function and return to the receive mode.

⑧ Output Level Indicator

This meter monitors the output level from the SM-10. Adjust the OUTPUT LEVEL control for a 0dB meter reading on the top scale.

⑨ Up Switch

⑩ Down Switch

Each push increases or decreases the operating frequency. Holding the switch down causes the transceiver to step continuously through frequencies.

⑪ Microphone Element

The SM-10 uses a sensitive, uni-directional condenser microphone element to produce the clearest audio signal possible.
