

Stoichiometry "End of Chapter" IN CLASS Practice Assessment

Background Info -

- Why are the coefficients in a balanced equation necessary for stoichiometry?
Coefficients are necessary for establishing a molar/mole ratio to convert between moles of different substances.

Skill - Using a balanced equation, calculate using mole to mole ratios. Using a balanced equation, given the grams of reactant, calc. the grams of product.

- Consider the following unbalanced equation:

There are 5.56g of manganese(IV) oxide present, calculate the grams of chlorine gas.

$$5.00\text{g MnO}_2 \times \frac{1\text{mol MnO}_2}{86.94\text{g MnO}_2} \times \frac{1\text{mol Cl}_2}{1\text{mol MnO}_2} \times \frac{70.90\text{g Cl}_2}{1\text{mol Cl}_2} = 4.00\text{g Cl}_2$$

Skill - After calculating theoretical yield in grams, calculate the percent yield.

- You are assigned to complete a lab. Before the reaction is complete, you calculate that a reaction should produce 4.0g Cu(s). After the lab is over you find that 2.8g Cu(s) was collected. What would the percent yield be for that reaction completed within the lab?

$$\% \text{ yield} = \left[\frac{\text{actual/theoretical}}{1} \right] \times 100 \\ = \left[\frac{2.8\text{g}/4.0\text{g}}{1} \right] \times 100 = 70\%$$

Skill - Given experimental data, determine the limiting reactant and the excess reactant.

- Calcium carbonate combines with gaseous hydrogen chloride to produce solid calcium chloride, gaseous carbon dioxide, and water vapor. What is the percent yield if 155g of calcium carbonate combines with 250.0g of hydrogen chloride and only 142.0g of calcium chloride is actually obtained within the lab setting? Complete and show work for all 3 steps of a stoichiometry problem.

$$155\text{g CaCO}_3 \times \frac{1\text{mol CaCO}_3}{100.09\text{g CaCO}_3} = 1.55\text{mol CaCO}_3 \quad \text{L.R.} \\ 1.55 \text{ mols}$$

$$250\text{g HCl} \times \frac{1\text{mol HCl}}{36.45\text{g HCl}} = 6.857 \text{ mol HCl} \quad \text{2mol in rxn} = 3.43 \text{ mols}$$

$$1.55\text{mol CaCO}_3 \times \left(\frac{1\text{mol CaCl}_2}{1\text{mol CaCO}_3} \right) \times \left(\frac{110.98\text{g CaCl}_2}{1\text{mol CaCl}_2} \right) = 172.02\text{g}$$

$$\% \text{ yield} = \left[\frac{\text{actual/theoretical}}{1} \right] \times 100 \\ = \left[\frac{142.0\text{g}/172.02\text{g}}{1} \right] \times 100 = 82.55\%$$

Hill, 2000 This text defines the concepts needed to learn or review cardiac auscultation The combination of audio and text explains how to identify and interpret normal and common abnormal heart sounds Some heart sounds are reproduced on a heart sound simulator allowing for a clear crisp grasp of specific individual sounds Others are recorded from real patients to distinguish between similar heart and lung sounds and to help the listener select the heart sounds from the auditory milieu

Solution Processing of Inorganic Materials David Mitzi, 2008-12-22 Discover the materials set to revolutionize the electronics industry The search for electronic materials that can be cheaply solution processed into films while simultaneously providing quality device characteristics represents a major challenge for materials scientists Continuous semiconducting thin films with large carrier mobilities are particularly desirable for high speed microelectronic applications potentially providing new opportunities for the development of low cost large area flexible computing devices displays sensors and solar cells To date the majority of solution processing research has focused on molecular and polymeric organic films In contrast this book reviews recent achievements in the search for solution processed inorganic semiconductors and other critical electronic components These components offer the potential for better performance and more robust thermal and mechanical stability than comparable organic based systems Solution Processing of Inorganic Materials covers everything from the more traditional fields of sol gel processing and chemical bath deposition to the cutting edge use of nanomaterials in thin film deposition In particular the book focuses on materials and techniques that are compatible with high throughput low cost and low temperature deposition processes such as spin coating dip coating printing and stamping

Throughout the text illustrations and examples of applications are provided to help the reader fully appreciate the concepts and opportunities involved in this exciting field In addition to presenting the state of the art research the book offers extensive background material As a result any researcher involved or interested in electronic device fabrication can turn to this book to become fully versed in the solution processed inorganic materials that are set to revolutionize the electronics industry

Advanced Functional Materials ,2012-12-31 This book deals with functional materials that are in the frontiers of current materials science and technology research development and manufacture The first of its kind it deals with three classes of materials 1 magnetic semiconductors 2 multiferroics and 3 graphene Because of the wide popularity of these materials there is a strong need for a book about these materials for graduate students new researchers in science and technology as well as experienced scientists and technologists technology based companies and government institutes for science and technology The book will provide this broad audience with both theoretical and experimental understanding to help in technological advances in the development of devices and related new technologies based on these very interesting and novel materials Covers both the theoretical and experimental aspects of advanced functional materials which are important for use in a number of rapidly developing novel technological devices Includes excellent coverage of three of the leading advanced functional materials Edited by a leading expert at the forefront of advanced functional materials research
