PM0002
MBA SEMESTER 3
ASSIGNMENT (SET - 1)**

Q1. Distinguish between value engineering & value analysis. Briefly explain the techniques used in value management?

Ans: Value engineering: (VE) is a systematic method to improve the "value" of goods or products and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. It is a primary tenet of value engineering that basic functions be preserved and not be reduced as a consequence of pursuing value improvements.

VE follows a structured thought process that is based exclusively on "function", i.e. what something "does" not what it is. For example a screw driver that is being used to stir a can of paint has a "function" of mixing the contents of paint can and not the original connotation of securing a screw into a screw-hole. In value engineering "functions" are always described in a

Liberatore, 2005 For nearly fifty years project professionals have used models such as Program Evaluation and Review Technique PERT to estimate the uncertainty of project duration Simulation packages such as the Graphical Evaluation and Review Technique GERT like many other similar packages a micro simulation approach subsequently emerged to model probabilistic project networks and project schedule uncertainty at the activity level But these models estimate repeated activities within loops of identical duration these estimate that the duration of one activity does not influence the duration of another activity To provide a simpler approach for modeling and analyzing projects with uncertain network structures where repeated activities do not share identical durations the authors present a macro level scenario approach one that provides exact results identifies several project network scenarios and shows project schedules may differ because uncertain events could occur during the project and because repeated activities independent or dependent could require uncertain duration loops The authors discuss the advantages of using the approach they suggest including its capacity to generalize standard project network analysis methods leading to the development of new project network uncertainty measures and to increase access and use of uncertainty analysis in project planning The scenario method proposed here is a direct extension of existing project scheduling procedures and uses software and techniques familiar to almost all project managers *Project Planning and Control Management* Ajay Deshmukh, S.
