**Fundamentals of Statistical Signal Processing** Steven M. Kay, 2013 For those involved in the design and implementation of signal processing algorithms this book strikes a balance between highly theoretical expositions and the more practical treatments covering only those approaches necessary for obtaining an optimal estimator and analyzing its performance Author Steven M Kay discusses classical estimation followed by Bayesian estimation and illustrates the theory with numerous pedagogical and real world examples Cover volume 1      *Fundamentals of Statistical Signal Processing: Detection theory* Steven M. Kay, 1998 V 2 Detection theory V 1 Estimation theory      **Statistical Inference for Engineers and Data Scientists** Pierre Moulin, Venugopal V. Cadzow, 1987      *Computer Books and Serials in Print*, 1985      **Machine Learning** Sergios Theodoridis, 2020-02-19 Machine Learning A Bayesian and Optimization Perspective 2nd edition gives a unified perspective on machine learning by covering both pillars of supervised learning namely regression and classification The book starts with the basics including mean square least squares and maximum likelihood methods ridge regression Bayesian decision theory classification logistic regression and decision trees It then progresses to more recent techniques covering sparse modelling methods learning in reproducing kernel Hilbert spaces and support vector machines Bayesian inference with a focus on the EM algorithm and its approximate inference variational

versions Monte Carlo methods probabilistic graphical models focusing on Bayesian networks hidden Markov models and particle filtering Dimensionality reduction and latent variables modelling are also considered in depth This palette of techniques concludes with an extended chapter on neural networks and deep learning architectures The book also covers the fundamentals of statistical parameter estimation Wiener and Kalman filtering convexity and convex optimization including a chapter on stochastic approximation and the gradient descent family of algorithms presenting related online learning techniques as well as concepts and algorithmic versions for distributed optimization Focusing on the physical reasoning behind the mathematics without sacrificing rigor all the various methods and techniques are explained in depth supported by examples and problems giving an invaluable resource to the student and researcher for understanding and applying machine learning concepts Most of the chapters include typical case studies and computer exercises both in MATLAB and Python The chapters are written to be as self contained as possible making the text suitable for different courses pattern recognition statistical adaptive signal processing statistical Bayesian learning as well as courses on sparse modeling deep learning and probabilistic graphical models New to this edition Complete re write of the chapter on Neural Networks and Deep Learning to reflect the latest advances since the 1st edition The chapter starting from the basic perceptron and feed forward neural networks concepts now presents an in depth treatment of deep networks including recent optimization algorithms batch normalization regularization techniques such as the dropout method convolutional neural networks recurrent neural networks attention mechanisms adversarial examples and training capsule networks and generative architectures such as restricted Boltzman machines RBMs variational autoencoders and generative adversarial networks GANs Expanded treatment of Bayesian learning to include nonparametric Bayesian methods with a focus on the Chinese restaurant and the Indian buffet processes Presents the physical reasoning mathematical modeling and algorithmic implementation of each method Updates on the latest trends including sparsity convex analysis and optimization online distributed algorithms learning in RKH spaces Bayesian inference graphical and hidden Markov models particle filtering deep learning dictionary learning and latent variables modeling Provides case studies on a variety of topics including protein folding prediction optical character recognition text authorship identification fMRI data analysis change point detection hyperspectral image unmixing target localization and more
