Application of Artificial Intelligence and Machine Learning to Accelerators Robert Garnett, Alexander Scheinker, Dean Lee, Andreas Adelman, 2023-10-31 Artificial Intelligence AI and Machine learning ML promise significant enhancements for particle accelerator operations including applications in diagnostics controls and modeling Challenges still exist in experimentally verifying AI ML methods before deployment at user facilities The ability to quickly generalize and adapt these methods to new operating configurations at the same facility or between facilities also remains a challenge and requires combining model independent adaptive feedback with traditional ML tools These methods also apply to the detection classification and prevention of operational anomalies that can cause accelerator damage or excessive beam loss in the case of abnormal operations Opportunity exists in broadening AI ML methods for early detection of a broad range of accelerator component or subsystem failures
