1. In certain breeds of dogs, deafness is due to a recessive allele (d) of a particular gene, and normal hearing is due to its dominant allele (D). What percentage of the offspring of a normal heterozygous (Dd) dog and a deaf dog (dd) would be expected to have normal hearing? A homozygous deaf dog and a homozygous normal?

2. In man, normal pigmentation is due to a dominant allele (C), and albinism to its recessive allele (c). A normal man marries an albino woman. Their first child is albino. What are the genotypes of these three people? If there are more children, what would they probably be like?

3. In minks, brown is dominant over silver-blue color. What offspring would you predict if you crossed a homozygous brown mink with a silver-blue mink?
