Gröbner's Problem and the Geometry of GT-Varieties Liena Colarte-Gómez, Rosa Maria Miró-Roig, 2024-10-02 This book presents progress on two open problems within the framework of algebraic geometry and commutative algebra Gröbner's problem regarding the arithmetic Cohen-Macaulayness aCM of projections of Veronese varieties and the problem of determining the structure of the algebra of invariants of finite groups We endeavour to understand their unexpected connection with the weak Lefschetz properties WLPs of artinian ideals In 1967 Gröbner showed that the Veronese variety is aCM and exhibited examples of aCM and nonaCM monomial projections Motivated by this fact he posed the problem of determining whether a monomial projection is aCM In this book we provide a comprehensive state of the art of Gröbner's problem and we contribute to this question with families of monomial projections parameterized by invariants of a finite abelian group called G-varieties We present a new point of view in the study of Gröbner's problem relating it to the WLP of Artinian ideals GT-varieties are a subclass of G-varieties parameterized by invariants generating an Artinian ideal failing the WLP called the Galois-Togliatti system We studied the geometry of the G-varieties we compute their Hilbert functions a minimal set of generators of their homogeneous ideals and the canonical module of their homogeneous coordinate rings to describe their minimal free resolutions We also investigate the invariance of nonabelian finite groups to stress the link between projections of Veronese surfaces the invariant theory of finite groups and the WLP Finally we introduce a family of smooth rational monomial projections related to G-varieties called RL-varieties We study the geometry of this family of nonaCM monomial projections and we compute the dimension of the cohomology of the normal bundle of RL-varieties This book is intended to introduce Gröbner's problem to young researchers and provide new points of view and directions for further investigations
