Multidisciplinary Design Optimization and Its Application in Deep Manned Submersible Design Binbin

Pan, Weicheng Cui, 2020-08-28 This book investigates Reliability based Multidisciplinary Design Optimization RBMDO theory and its application in the design of deep manned submersibles DMSs Multidisciplinary Design Optimization MDO is an effective design method for large engineering systems like aircraft warships and satellites which require designers and engineers from various disciplines to cooperate with each other MDO can be used to handle the conflicts that arise between these disciplines and focuses on the optimal design of the system as a whole However it can also push designs to the brink of failure In order to keep the system balanced Reliability based Design RBD must be incorporated into MDO Consequently new algorithms and methods have to be developed for RBMDO theory This book provides an essential overview of MDO RBD and RBMDO and subsequently introduces key algorithms and methods by means of case analyses In closing it introduces readers to the design of DMSs and applies RBMDO methods to the design of the manned hull and the general concept design The book is intended for all students and researchers who are interested in system design theory and for engineers working on large complex engineering systems

A Cascade Optimization Strategy for Solution of Difficult Multidisciplinary Design Problems, 1996

A research project to comparatively evaluate 10 nonlinear optimization algorithms was recently completed A conclusion was that no single optimizer could successfully solve all 40 problems in the test bed even though most optimizers successfully solved at least one third of the problems We realized that improved search directions and step lengths available in the 10 optimizers compared were not likely to alleviate the convergence difficulties For the solution of those difficult problems we have devised an alternative approach called cascade optimization strategy The cascade strategy uses several optimizers one followed by another in a specified sequence to solve a problem A pseudorandom scheme perturbs design variables between

the optimizers The cascade strategy has been tested successfully in the design of supersonic and subsonic aircraft configurations and air breathing engines for high speed civil transport applications These problems could not be successfully solved by an individual optimizer The cascade optimization strategy however generated feasible optimum solutions for both aircraft and engine problems This paper presents the cascade strategy and solutions to a number of these problems A *General-Purpose Optimization Engine for Multi-Disciplinary Design Applications* Surya N. Patnaik,1996 **Analytic Methods for Design Practice** Gyung-Jin Park,2007-05-31 In the competitive world of modern engineering rigorous and definite design methodologies are needed However many parts of engineering design are performed in either an ad hoc manner or based on the intuition of the engineer This is the first book to look at both stages of the design process conceptual design and detailed design and detail design methodologies for every step of the design process The following analytic design methodologies are introduced and their usefulness is explored with many mathematical and practical examples Axiomatic design Optimization Design of experiments Robust design Structural optimization Dynamic response optimization and Multidisciplinary optimization Case studies show how practical design problems can be solved with analytic design methods Students will find this book an excellent introduction to the subject The book s practical focus will interest practising engineers as a practical handbook of design **Bi-Level Integrated System Synthesis (BLISS)** Jaroslaw Sobieszczanski-Sobieski,1998 Performance Trend of Different Algorithms for Structural Design Optimization Surya N.
