Networking Essentials Practice Final Exam Answers Full 100% 2019

1. Which is the reason that electronic data is represented as bits in computer processing and data communication?

- a. Bits are the simplest level of data that can be processed.
- b. Bits are the smallest amount of data that can be transmitted, passed to users.
- c. **Electronic systems only process digital data.**
- d. Bits are the smallest amount of information that can be stored.

Explanation:

An electronic communication device is represented by 1's and 0's. These 1's and 0's are represented as an electronic signal. This method is identified as digital binary, and electronic data is called as digital binary. This method is used for almost every application and even for transmission over long distances without the quality becoming degraded.

2. Which term is used to describe a network device that routes or switches between two adjacent nodes?

- a. node server
- b. interface
- c. **router**
- d. switch

Explanation:

A router device has multiple connected ports, provides data packets the required address to reach their destination, and routes traffic across a wide network in different directions depending upon their source and their destination. It also provides for security, authentication, and other services that are required for connecting the network to the internet and other networks.

3. Which is a factor of an interconnected computing device's use of networks?

- a. The device can only process a limited amount of information for each device.
- b. **Interconnected parts contribute to processing data using the network.**
- c. Some applications have support facilities when the network is used.
- d. Some data is processed sequentially and the underlying communication system.

Explanation:

Interconnected computing or other interconnected networks allow systems to communicate with one another and with the communication data. Various technologies, including cloud-based computing, help improve the network's data communication, providing more secure information, providing information in a more flexible and portable way, and providing the flow of data through interconnected networks.

4. Which type of computer's architecture plan for using two buses in a network plan for a single network?

- a. **bus-based architecture**
- b. distributed system
- c. network plan
- d. routing nodes
