Be able to:

- Determine the missing angle of a triangle when given two of the angles. An example of this would be if two angles of a triangle measured 22 and 50 degrees, what would the third angle measure? To answer this, you must understand that the sum of three angles of a triangle (no matter what size or shape) equals 180 degrees. So to answer the question, add 22 degrees + 50 degrees = 72 degrees. Then take 180 degrees and subtract 72 degrees to get the answer of the third angle, which would be 108 degrees.
- Be able to do the same with a quadrilateral as you did with the triangle.
- Be able to triangulate a polygon. An example of this would be .
- Be able to determine the total amount of degrees of a polygon after triangulating it. Example is the previous polygon, would be 3 triangles since 180 degrees equals 540 degrees.
- Be able to draw rectangle ABCD. Make side AB = 2 cm, Make side BC = 4 cm. Remember to label your polygon. Do you think anyone will draw the same rectangle? Why or why not?
- Be able to measure and draw angles.
- We will also review adding and subtracting fractions such as $\frac{1}{2} + \frac{1}{3}$.
