

Questions

Besides assessing your knowledge of hardware and networking, the interviewer may ask questions that test your problem-solving skills by asking how would you behave in case of an IT issue at the company. Consider these common hardware and networking interview questions and answers:

1. What does network mean?
2. How do you secure a computer network?
3. What does HTTP mean?
4. What is bandwidth?
5. What is an IP address?
6. How would you recover lost files from a system infected by a virus?
7. What is ASCII?
8. What's the difference between a firewall and an antivirus?

1. What does network mean?

This question tests if you know the basics of the subject to assess if you're a good candidate for the role. The best answer is specific, accurate and uses the correct technical terms. By using the STAR method, you can also add a relevant example of a situation when you used your knowledge of this subject to show your experience to the interviewer.

Example: *"A network consists of multiple computers, tablets or smartphones that communicate with each other. A device is said to be networked with another when it's able to communicate data to the other device. Two devices can be networked with each other over cable media or wireless media, such as Wi-Fi. Today, there are different kinds of networks, but they fall under two major categories: LAN and WAN. LAN networks are limited to a restricted area, while WAN ones can connect computers in multiple locations.*

For example, at my previous company, I set up a Wi-Fi network that allowed connection to not only the desktop computers in the different offices but even laptops, tablets or smartphones. This way, I could give Wi-Fi access to guests, as well as to colleagues who wanted to work from their personal laptop or mobile device."
