

To access the following structures, you will have to cut down either side of the jaw and pry the jaw down. This can be difficult and requires some force. You, essentially, must break the jaw, and it will make a cracking sound. Once you do this locate the **epiglottis**, a cone-shaped structure at the back of the mouth, a flap of skin helps to cover the trachea when a pig swallows. The **pharynx** (throat) is the cavity in the back of the mouth – it is the junction for food (esophagus) and air (trachea).

5. Observe the toes of the pig. How many toes are on the feet? _____
Do they have an odd or even number of toes? _____

****Make sure you know the locations of all the bold words on this handout****

You will now work on opening the abdominal and thoracic cavities of the pig and identify structures. Remember, that to dissect means to "cut into pieces" from Latin *dessicare* - a careful dissection will make it easier for you to find the organs and structures. Be sure to follow all directions.

The Incision:

Place your fetal pig in the dissecting pan ventral side up. Use string to tie the legs behind the back of the pan. Use scissors to cut through the skin and muscles according to the diagram. Do not remove the umbilical cord.

After completing the cuts, locate the **umbilical vein** that leads from the umbilical cord to the liver. You will need to cut this vein in order to open up the abdominal cavity.

Your pig may be filled with water and preservative, drain over the sink if necessary.

Neck region:

Using the diagram to the right begin your dissection in the neck region. Try to cut as little as possible. Once you open the body cavity, you will generally be able to separate the different organs by simply pulling them apart with your fingers, forceps, or a probe. The more you cut things up, the harder it will be to figure out what you're looking at. Cut midline on the ventral surface of the neck to expose the underlying muscles. Carefully separate the muscles to observe the underlying structures. Locate and understand the functions of the following structures:

- **Larynx:** an enlarged structure on the trachea. If you cut it open, you can see the vocal cords inside.
- **Thymus gland:** an endocrine (hormone-secreting) gland that helps regulate the immune system. It's a large, spongy structure covering the ventral surface of the trachea and extends up along either side and also resides over the heart. It is easy to cut so be extra careful.
- **Thyroid gland:** another endocrine gland; it's a small bilobed (two parts) structure just posterior to the larynx. The thyroid secretes hormones that help regulate metabolism.
- **Trachea:** the airway; it's reinforced with rings of cartilage so it does not collapse.
