White, 2017-01-01 In *Constructing Policy Change* Linda A White examines the expansion of early childhood education and care ECEC policies and programs in liberal welfare states including Australia Canada New Zealand the UK and the USA In the first part of the book the author investigates the sources of policy ideas that triggered ECEC changes in various national contexts This is followed by a close analysis of cross national variation in the implementation of ECEC policy in Canada and the USA White argues that the primary mechanisms for policy change are grounded in policy investment logics as well as cultural logics that is shifts in public sentiments and government beliefs about the value of ECEC policies and programs are rooted in both evidence based arguments and in principled beliefs about the policy A rich nuanced examination of the reasons motivating ECEC policy expansion and adoption in different countries *Constructing Policy Change* is a corrective to the comparative welfare state literature that focuses on political interest alone **The Essential 25** Marilee

**Challenging the School Readiness Agenda in Early Childhood Education** Miriam B. Tager, 2017-03-27. Challenging the normative paradigm that school readiness is a positive and necessary objective for all young children, this book asserts that the concept is a deficit-based practice that fosters the continuation of discriminatory classifications. Tager draws on findings of a qualitative study to reveal how the neoliberal agenda of school reform based on high-stakes testing sorts and labels children as non-ready, affecting their overall schooling careers. Tager reflects critically on the relationship between race and school readiness, showing how the resulting exclusionary measures perpetuate the marginalization of low-income Black children from an early age. Disrupting expected notions of readiness is imperative to ending practices of structural classism and racism in early childhood education.

**The SAGE Encyclopedia of Contemporary Early Childhood Education** Donna Couchenour, J. Kent Chrisman, 2016-08-16. The general public often views early childhood education as either simply babysitting or as preparation for later learning. Of course, both viewpoints are simplistic. Deep understanding of child development, best educational practices based on development, emergent curriculum, cultural competence, and applications of family systems are necessary for high-quality early education. Highly effective early childhood education is rare in that it requires collaboration and transitions among a variety of systems for children from birth through eight years of age. The SAGE Encyclopedia of Contemporary Early Childhood Education presents in three comprehensive volumes advanced research, accurate practical applications of research, historical foundations, and key facts from the field of contemporary early childhood education. Through approximately 425 entries, this work includes all areas of child development: physical, cognitive, language, social, emotional, aesthetic, as well as a comprehensive review of best educational practices with young children, effective preparation for early childhood professionals, and policy-making practices, and addresses such questions as: How is the field of early childhood education defined? What are the roots of this field of study? How is the history of early childhood education similar to yet different from the study of public education? What are the major influences on understandings of best practices in early childhood education?
