

How to write a case report

Rahij Anwar and colleagues give advice on the practical details of writing case reports.

Research has become an integral part of medical careers. A case report is a way of communicating information to the medical world about a rare or unreported feature, condition, complication, or intervention by publishing it in a medical journal.

When to start

Be on the look out for a case report from the start of your basic surgical or medical training. This will introduce you to the research world, and if your report is published it will be an asset to your CV. Any kind of research entails a lot of hard work and persistence. Your thought processes should be geared towards research in your postgraduate career, and you should use every opportunity you get for writing a report. So if you come across something unusual, discuss it with a consultant, particularly one who is keen on research.

Many consultants have huge amounts of material in the top drawers of their desks, waiting to be published. All they want is an enthusiastic medic who will help share their load in writing and getting it published. They are usually helpful if you ask them about this.

How to start

A senior doctor's help is a must from the beginning. He or she may know from their experience what cases are suitable for publication. Do an extensive literature search—PubMed, Medline, Ovid, Embase, and even search engines like Google will give you a vast amount of information related to the condition or feature you are after. Narrow down the search to your actual topic. If this comes up with very few search results, it means (assuming your search method is correct) that the case is rare and the report is therefore more likely to be published.

Your hospital library staff can help (especially in the beginning) by doing your searches for you and then getting relevant literature from other sources, if necessary. So don't be afraid to ask them. It is always useful to read in a standard textbook or appropriate journal everything about the topic that your case report relates to. Note down or photocopy important references at the end of the chapter or article and follow them up.

Obtaining consent from the patient is not only good medical practice but also mandatory for some journals, such as the *BMJ* (which has its own consent form on handouts). If there is no standard form, make up your own. It is useful to have the patient's contact details on the form just in case you want to trace him or her later. It is also polite to ask permission from the doctor in charge of the patient's management.

How to collect information related to the case

After you have done the groundwork, collect all the material for the case report. Use the patient's notes to record the details of all the events in the patient's care—that is, history, examination findings, results of investigations with dates, and operative findings, if any, together with the details of the actual intervention and follow ups. Get copies—do not take the originals (they are the patient's only records for future reference). You are allowed to have copies only of radiographs, slides, photographs, and so on, but in this electronic age it is better to use a digital camera for your personal copies of radiographs and clinical photographs. This avoids many potential problems and saves a lot of time. Make sure you return the notes

and radiographs to their original source. You should also visit the patient again and make sure you have got the facts right.

Which journal to choose

Again, the advice of your supervising consultant is useful. Select a journal that you think would be the most appropriate for your case report. For example, unusual injury presentations are more likely to be accepted in the journals such as *Trauma* rather than more mainstream, general interest journal. The *BMJ* does not publish case reports, only Lessons of the Week. In other words, be sensible in choosing the journal.

Download or copy the information for authors for that particular journal and keep the hard copy safely in a folder with all the other information about the case. It is also useful to have a copy of any case report from a previous issue of the journal to get an idea of the presentation. It is extremely important to understand the basic format required by the journal. Your case report may be rejected because it does not conform to the standard format, no matter how good the content is. Margins, spacing, figure numbering, and style of references (Vancouver, Harvard, and so on), all are important aspects.

How many colleagues should be included?

The best answer is not many: the supervising consultant and maybe one or two other colleagues, depending on how sincere and helpful they have been in collecting information or literature. You or your consultant (discuss with him or her) must be the first author. Do not ever give photographs or any other material related to your case report to anyone who you think might misplace them.

How do I write it?

It is best to write everything in one stretch. Piecemeal writing consumes time because you have to go over everything repeatedly. The following format is the most common way of writing a case report.

Introduction

Describe your case report in one sentence. Also mention how rare it is.

Case report

You have to summarise the information that you have gathered: a brief history and important and relevant positive and negative findings with details of investigations, treatment, and the condition of the patient after treatment. Don't include unnecessary details. Remember, this part should read like an interesting story, which your reader should enjoy.

One common form of presentation is to divide it into separate paragraphs with history, examination, investigation, treatment, and outcome in separate paragraphs—a textbook style of presentation without the headings.

Discussion

Remember that the probability of getting any research work published in a reputable journal is determined primarily by how well your arguments are presented scientifically—that is, how your report is supported or discussed. The first paragraph may explain the objective of reporting the case.

You must subsequently describe what others have written before about the condition or any related feature. Be generous in quoting the literature but don't go into unnecessary details.

The third and most important stage in the discussion is to substantiate the message you are trying to convey. Your reviewers want proof of the rarity of the condition and the scientific explanations for it. If you don't do this, they are likely to reject your report immediately. So you must be able to describe the cause of the condition or why a particular procedure or feature was chosen. How did it influence the outcome? How does it differ from usual and what are your

How Write Case Report:

Writing Case Reports Clifford D. Packer, Gabrielle N. Berger, Somnath Mookherjee, 2016-11-02 This book provides medical students and physicians with a practical step by step guide on how to write and publish a medical case report The case report is the traditional way for physicians to describe their unique or unusual cases to a broad audience and it plays an important role in the discovery of new diseases or syndromes unusual manifestations of disease important adverse drug reactions and the generation of hypotheses for further study This book guides readers through the process from choosing a case to report on to finding a publisher and then comment on future directions and potential new uses of case reports including expanded computer case databases to optimize care for individual patients and new applications in medical education Interspersed throughout the text are example case reports many written by the authors with commentary on their experiences working with those reports to provide context and aid readers in creating clear concise and useful case reports *How to Write Better Medical Papers* Michael Hanna, 2019-03-20 This book guides medical researchers through all stages of transforming their scientific data and ideas into a published paper Many researchers in medicine including the life sciences and health sciences struggle to get their research written and published Manuscripts are typically rejected and or sent back for revisions several times before ever being published One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers research methodology ethics statistics data visualization writing revising and the practicalities of publishing Instead of wasting the reader s time discussing trivialities of punctuation spelling etc this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals The section Preparing covers the range of methodological ethical and practical aspects that researchers need to address before starting to write their paper The section Analyzing reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author s decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life

A member-based approach* Bernhard Prantl,2015-02-18 Diploma Thesis from the year 2015 in the subject Business economics Miscellaneous grade Distinction 90 University of Bradford School of Management course Applied Management and Enterprise language English abstract Purpose This study sought to enhance the process of valuing young companies with a high potential for growth by considering the link between the member base and the market value of the company Outcomes were supposed to be an increase in predictive potential concerning young companies and their value as investments A potential integration of more accurate methods would lead to a significant rise in profits for investment companies Moreover the resulting increase in trust in risky projects through better understanding of their value would also increase the number of new innovations Hence more funding would be available due to decreasing

investment risk Methodology Following the Platonist philosophy proposed by Lomas 2011 the study incorporated three steps First an intensive investigation revealed factors which have an impact on the value of companies and evaluated traditional approaches The second step was to predict the potential of the new methods based on the member base of the organisation Finally the last step was deployed in a mixed case study approach following the recommendations of Yin 2009 where these predictions were challenged In particular LinkedIn Xing and Viadeo were chosen to challenge the proposed method based on the research of Krafft et al 2005 and Kemper 2010 Findings The literature review was able to reveal several gaps in traditional methods particularly when it comes to valuing young companies Additionally primary research more precisely qualitative interviews revealed that traditional calculations are at best used as secondary sources when it comes to the value of a young company Accuracy was revealed by the interviews to be acceptable given the high potential for profit But considering the low success rate of 30% to 50% a high potential for more accurate prediction was revealed The model was successfully deployed in the case studies where qualitative and quantitative data was used to determine the value of each company under consideration for several different time periods The direct comparison of traditional valuation methods with the new proposed method revealed the high potential of the member based method It has been established that the new model can considerably increase the accuracy of the valuation and assist in predicting member base growth
