Hydrogen Fuel Cells Problems:

Unsettled Issues Concerning the Use of Fuel Cells in Electric Ground Vehicles Bart Kolodziejczyk, 2019-10-29 Hydrogen fuel is rapidly emerging as a clean energy carrier solution that has the potential to decarbonize a variety of industries including or predominantly the transportation industry Fuel cell electric vehicles FCEVs which electrochemically combine stored hydrogen with atmospheric oxygen to efficiently generate electricity while producing only water vapor and small amounts of heat are heralded to be a game changing technology The so called hydrogen economy has the potential to displace traditional fossil fuel based economy with the transportation industry being the first mover in the hydrogen space Technological advances made in the last decade in the areas of hydrogen generation and fuel cell technology have enabled the current uptake of hydrogen based solutions for vehicle applications Reduced costs climate change and carbon tax mechanisms are driving many governments manufacturers and consumers toward hydrogen powered vehicles The major drawbacks of hydrogen compared to the other competing clean energy technologies e g battery power is the high cost of hydrogen refueling and FCEVs However application of the economy of scale will enable further cost reduction and broad international uptake of hydrogen in automotive applications This SAE EDGE Research Report explores the opportunities and challenges of hydrogen and fuel cell systems in the automotive industry With the help of expert contributors several different technological economic and safety aspects are considered to develop a better understanding of this emerging hydrogen based automotive industry While debates between proponents of battery electric vehicles BEVs and FCEVs continue the current report discusses the unsettled issues in the latter technology and presents a critical overview of the hydrogen and fuel cell systems in the automotive industry Finally the report concludes with a series of recommendations aimed at the industry and government stakeholders for implementing and advancing hydrogen transportation projects NOTE SAE EDGE Research Reports are intended to identify and illuminate critical issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2019002>

Unsettled Issues Concerning the Economics of Fuel Cells and Electric Ground Vehicles Bart Kolodziejczyk, 2020-06-03 This SAE EDGE Research Report looks at the pros and cons of moving this technology forward and brings recommendations to facilitate a smooth transition from fossil fuel based to hydrogen based mobility Unsettled Issues Concerning the Economics of Fuel Cells and Electric Ground Vehicles discusses the unsettled economic aspects of hydrogen and fuel cell applications in the automotive industry Lately the idea of using hydrogen in automotive applications is gaining momentum While the concept of using clean hydrogen fuel generated from water via electrolysis is nothing new previous efforts to mainstream the technology failed miserably About a decade ago the fuel cell technology which efficiently converts

hydrogen and atmospheric oxygen into electricity was not as advanced and the fuel cell prototypes were bulky and expensive Yet many new fuel cell electric vehicles FCEVs have emerged and hydrogen refueling infrastructure is being built globally Despite the important steps forward hydrogen generation and fuel cells are still costly and cannot compete with fossil fuel based solutions While it can be a viable tool in combating climate change and air pollution hydrogen currently hardly makes a business case And although many hydrogen infrastructure developments are fueled by government subsidies and fear of carbon tax detailed economic evaluation suggests that creating a hydrogen economy of scale can reduce technology costs creating the window of opportunity it needs to become a concrete global market player Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020002> *Treatment of Biogas for Feeding High Temperature Fuel Cells* Maria Turco, Angelo Ausiello, Luca Micoli, 2016-02-13 This book reports on the most recent applications of processes with a particular focus on the source and the properties of biogas and on the characteristics of the fuel cells FCs It describes adsorbing materials of potential interest are reviewed and the preparation methods and treatments employed to improve the adsorption properties as well as the stability and regenerability The characterization of the chemical and physical properties involved in these processes is examined in particular detail The book also covers aspects that concern the development of the adsorption apparatus with particular attention on the target of low residual concentration and high selectivity High temperature FCs such as molten carbonates MCFs or solid oxides SOFCs are efficient with a low environmental impact and they can use a wide variety of fuels such as biogas The presence of some poisonous compounds such as sulphides halides and siloxanes can react with electrode catalysts and electrolyte leading to the degradation and short lifetime of the cell The treatment of raw biogas to obtain a FC compatible fuel is mainly based on adsorption processes on suitable materials

Ecology in Transport: Problems and Solutions Aleksander Sładkowski, 2020-03-17 This book analyzes how transport influences the ecology of various regions Integrating perspectives and approaches from around the globe it examines the use of different types of engines and fuels and assesses the impact of vehicle design on the environment The book also addresses the effect of the transport situation in agglomerations on their environmental safety Various types of environmental impacts are considered from traditional emissions to noise and vibration Presenting scientific advances from 7 European countries the book appeals to experts teachers and students as well as to anyone interested in the environmental aspects of the transport industry
