distinct routes to explain how agents speech patterns account for their performance Analyses in Experiment 2 demonstrate that relative to human agents AI bots could backfire and lead to worse performance when the customer persuasion task is more complex In my second essay I explore the coexistence of performance improvement and employee resistance to AI supervision Specifically I develop a novel two by two field experiment which randomly assigns the AI or human supervision entity and discloses the entity or not to separate the economic gain from negative reactance to AI In addition I uncover the underlying mechanism by identifying employees subjective bias to the AI feedback quality and heightened fear of job replacement once they know the supervision entity is AI rather than human managers I propose two strategies to alleviate employees resistance to AI supervision
