**Topics in Language Resources for Translation and Localisation** Elia Yuste Rodrigo, 2008-11-12 Language Resources LRs are sets of language data and descriptions in machine readable form such as written and spoken language corpora terminological databases computational lexica and dictionaries and linguistic software tools Over the past few decades mainly within research environments LRs have been specifically used to create optimise or evaluate natural language processing NLP and human language technologies HLT applications including translation related technologies Gradually the infrastructures and exploitation tools of LRs are being perceived as core resources in the language services industries and in localisation production settings However some efforts ought yet to be made to raise further awareness about LRs in general and LRs for translation and localisation in particular to a wider audience in all corners of the world Topics in Language Resources for Translation and Localisation sets out to establish the state of the art of this ever expanding field and underscores the usefulness that LRs can potentially have in the process of creating adapting managing standardising and leveraging content for more than one language and culture from various perspectives *A Handbook of Process Tracing Methods for Decision Research* Michael Schulte-Mecklenbeck, Anton Kuehberger, Joseph G. Johnson, 2011-05-20 This handbook provides a critical review and user s guide to conducting and reporting process tracing studies of decision making Each chapter covers a specific method that is presented and reviewed by authors who are experts in the method s application to decision research The book ultimately illustrates and presents a multi method approach and is essential reading for graduate students and researchers wishing to undertake such studies on decision making *Bluetooth Security Attacks* Keijo Haataja, Konstantin Hyppönen, Sanna Pasanen, Pekka Toivanen, 2013-10-28 Bluetooth technology has enjoyed tremendous success and it s now employed in billions of devices for short range wireless data and real time audio or video transfer In this book the authors provide an overview of Bluetooth security They examine network vulnerabilities and provide a literature review comparative analysis of recent security attacks They analyze and explain related countermeasures including one based on secure simple pairing and they also propose a novel attack that works against all existing Bluetooth versions They conclude with a discussion on future research directions The book is appropriate for practitioners and researchers in information security in particular those engaged in the design of networked and mobile devices **Use and effect of declarative information in user instructions** Joyce Karreman, 2021-11-01 Apart from the procedural information that describes how a device should be operated instructions for use include different types of declarative information such as information about the internal working of the device system information and information about the circumstances in which the different functions can be used utilization information In this study the use and the effects of system and utilization information are investigated in a number of experiments The results demonstrate that users spend a considerable amount of time on reading each information type However contrary to common belief system information has only limited effects

utilization information does not affect task performance at all Moreover users of instructions without declarative information are more confident in their ability to learn to work with the device and consider the learning process less difficult than users of instructions with declarative information These results suggest that users of instructions without system and utilization information are capable to use other information sources such as the procedural information and the interface of the device to derive the required declarative knowledge

Macroeconometrics Kevin D. Hoover,2012-12-06 Each chapter of Macroeconometrics is written by respected econometricians in order to provide useful information and perspectives for those who wish to apply econometrics in macroeconomics The chapters are all written with clear methodological perspectives making the virtues and limitations of particular econometric approaches accessible to a general readership familiar with applied macroeconomics The real tensions in macroeconometrics are revealed by the critical comments from different econometricians having an alternative perspective which follow each chapter
