

### Example

There is benefit to a kiwifruit grower of having a honey producer living next door – the ‘next-door’ bees pollinate the kiwifruit and save the grower the expense of hiring beehives for pollination.

Externalities can occur as the result of **consumption** or **production**; a *negative consumption externality* would be the litter alongside the highway resulting from the consumption of fast foods. A *positive consumption externality* is education – it benefits not only the person who has gained knowledge, but also the whole community, which can benefit from increased production and employment.

Externalities		
	Positive	Negative
Consumption	Reduced healthcare cost for government when people exercise	More fights on the street on ‘cheap drinks’ nights at pubs
Production	A new business increases employment and produces a flow-on effect of income generation	Unpleasant smells from a tannery

### Activity 11A: Externalities

Ans. p. 327

- What is an externality?
  - If there is an externality in a market, what happens?
  - Distinguish between an externality of *consumption* and an externality of *production*.
- Copy the table and classify each of the following in terms of whether they are a positive or a negative externality, and whether they are an externality of consumption or of production.

Event	Positive or negative	Consumption or production
a. An old car creates a lot of smoky pollution		
b. An oil company chemist finds a way to create low-polluting fuel for old cars		
c. A shade tree keeps its owners cool in summer, but fills up a neighbour’s swimming pool with leaves in autumn		
d. A firm introduces ground-breaking industry training for employees		
e. Polio immunisation schemes		
f. A power station discharges hot water into a river		
g. Fast-food outlets package their food hygienically, but add to the rubbish dumped along a state highway		
h. People living near a large airport suffer from excess noise
