1	<p style="text-align: center;"><b>Vulnerability of Network Mechanisms to Sophisticated DDoS Attacks</b></p> <p>In recent years, we have experienced a wave of DDoS attacks threatening the welfare of the internet. These are launched by malicious users whose only incentive is to degrade the performance of other, innocent, users. The traditional systems turn out to be quite vulnerable to these attacks. The objective of this work is to take a first step to close this fundamental gap, aiming at laying a foundation that can be used in future computer/network designs taking into account the malicious users. Our approach is based on proposing a metric that evaluates the vulnerability of a system. We then use our vulnerability metric to evaluate a data structure which is commonly used in network mechanisms—the Hash table data structure. We show that Closed Hash is much more vulnerable to DDoS attacks than Open Hash, even though the two systems are considered to be equivalent by traditional performance evaluation. We also apply the metric to queuing mechanisms common to computer and communications systems. Furthermore, we apply it to the practical case of a hash table whose requests are controlled by a queue, showing that even after the attack has ended, the regular users still suffer from performance degradation or even a total denial of service.</p>	<p style="text-align: center;">DDoS, hash, queue, vulnerability, metric, malicious</p> <p style="text-align: center;">(IEEE TRANSACTIONS ON COMPUTERS, VOL. 62, NO. 5, MAY 2013)</p>
2	<p style="text-align: center;"><b>Cluster-Based Co-Saliency Detection</b></p> <p>Co-saliency is used to discover the common saliency on the multiple images, which is a relatively underexplored area. In this paper, we introduce a new cluster-based algorithm for co-saliency detection. Global correspondence between the multiple images is implicitly learned during the clustering process. Three visual attention cues: contrast, spatial, and corresponding, are devised to effectively measure the cluster saliency. The final co-saliency maps are generated by fusing the single image saliency and multi-image saliency. The advantage of our method is mostly bottom-up without heavy learning, and has the property of being simple, general, efficient, and effective. Quantitative and qualitative experiments result in a variety of benchmark datasets demonstrating the advantages of the proposed method over the competing co-saliency methods. Our method on single image also outperforms most the state-of-the-art saliency detection methods. Furthermore, we apply the co-saliency method on four vision applications: co-segmentation, robust image distance, weakly supervised learning, and video foreground detection, which demonstrate the potential usages of the co-saliency map.</p>	<p style="text-align: center;">Saliency detection, co-saliency, co-segmentation, weakly supervised learning.</p> <p style="text-align: center;">(IEEE TRANSACTIONS ON IMAGE PROCESSING, VOL. 22, NO. 10, OCTOBER 2013)</p>
3	<p style="text-align: center;"><b>Adaptive Position Update for Geographic Routing in Mobile Ad Hoc Networks</b></p> <p>In geographic routing, nodes need to maintain up-to-date positions of their immediate neighbors for making effective forwarding decisions. Periodic broadcasting of beacon packets that contain the geographic location coordinates of the nodes is a popular method used by most geographic routing protocols to maintain neighbor positions. We contend and demonstrate that periodic beaconing regardless of the node mobility and traffic patterns in the network is not attractive from both update cost and routing performance points of view. We propose the</p>	<p style="text-align: center;">Wireless communication, algorithm/protocol design and analysis, routing protocols</p> <p style="text-align: center;">(IEEE TRANSACTIONS ON MOBILE COMPUTING, VOL. 12, NO. 3, MARCH 2013)</p>

Extracting program features processing those features into suitable representations and constructing distance metrics to define similarity and dissimilarity are the key methods to identify software variants clones derivatives and classes of software

Software Similarity and Classification reviews the literature of those core concepts in addition to relevant literature in each application and demonstrates that considering these applied problems as a similarity and classification problem enables techniques to be shared between areas Additionally the authors present in depth case studies using the software similarity and classification techniques developed throughout the book

Effective Model-Based Systems Engineering John M. Borke, Thomas H. Bradley, 2018-09-08 This textbook presents a proven mature Model Based Systems Engineering MBSE methodology that has delivered success in a wide range of system and enterprise programs The authors introduce MBSE as the state of the practice in the vital Systems Engineering discipline that manages complexity and integrates technologies and design approaches to achieve effective affordable and balanced system solutions to the needs of a customer organization and its personnel The book begins with a summary of the background and nature of MBSE It summarizes the theory behind Object Oriented Design applied to complex system architectures It then walks through the phases of the MBSE methodology using system examples to illustrate key points Subsequent chapters broaden the application of MBSE in Service Oriented Architectures SOA real time systems cybersecurity networked enterprises system simulations and prototyping The vital subject of system and architecture governance completes the discussion The book features exercises at the end of each chapter intended to help readers students focus on key points as well as extensive appendices that furnish additional detail in particular areas The self contained text is ideal for students in a range of courses in systems architecture and MBSE as well as for practitioners seeking a highly practical presentation of MBSE principles and techniques
