Monte Carlo Calculations in Nuclear Medicine, Second Edition Michael Ljungberg, Sven-Erik Strand, Michael A. King, 2012-11-06 From first principles to current computer applications Monte Carlo Calculations in Nuclear Medicine Second Edition Applications in Diagnostic Imaging covers the applications of Monte Carlo calculations in nuclear medicine and critically reviews them from a diagnostic perspective Like the first edition this book explains the Monte Carlo method and the principles behind SPECT and PET imaging introduces the reader to some Monte Carlo software currently in use and gives the reader a detailed idea of some possible applications of Monte Carlo in current research in SPECT and PET New chapters in this edition cover codes and applications in pre clinical PET and SPECT The book explains how Monte Carlo methods and software packages can be applied to evaluate scatter in SPECT and PET imaging collimation and image deterioration A guide for researchers and students developing methods to improve image resolution it also demonstrates how Monte Carlo techniques can be used to simulate complex imaging systems

Production Yield of Muon-Induced Neutrons in Lead Holger Kluck, 2015-07-28 The work presented in this book is a major step towards understanding and eventually suppressing background in the direct search for dark matter particles scattering off germanium detectors Although the flux of cosmic muons is reduced by many orders of magnitude in underground laboratories the remaining energetic muons induce neutrons through various processes neutrons that can potentially mimic a dark matter signal This thesis describes the measurement of muon induced neutrons over more than 3 years in the Modane underground laboratory The data are complemented by a thorough modeling of the neutron signal using the GEANT4 simulation package demonstrating the appropriateness of this tool to model these rare processes As a result a precise neutron production yield can be presented Thus future underground experiments will be able to reliably model the expected rate of muon induced neutrons making it possible to develop the necessary shielding concept to suppress this background component
