**Reporting and Publishing Research in the**

**Biomedical Sciences** Peush Sahni, Rakesh Aggarwal, 2018-08-21 This book eases the task of converting research work into a manuscript and covers the recent developments in publishing that often stump budding researchers. Few researchers in the biomedical sciences are trained in the essential skills of reporting their results and they seek help in writing a paper that will be acceptable for publication in the right journal and in presenting their results effectively at a meeting. As well as covering the basic aspects of preparing manuscripts for publication, the book discusses best practices and issues relating to the publication of biomedical research including topics such as peer review, authorship, plagiarism, conflicts of interest, publication misconduct, electronic publishing, and open access journals. With more than two decades of experience in conducting workshops on writing scientific papers, the editors have brought together the expertise of 29 authors from seven countries to produce this one-stop guide to publishing research in biomedical sciences. This book is intended for young researchers who are beginning their careers and wish to hone their skills and understand the rigors of research writing and publishing.

**Atlas of Knowledge** Katy Borner, 2015-03-20 The power of mapping principles for visualizing knowledge illustrated by many stunning large-scale full-color maps. Maps of physical spaces locate us in the world and help us navigate unfamiliar routes. Maps of topical spaces help us visualize the extent and structure of our collective knowledge; they reveal bursts of activity, pathways of ideas, and borders that beg to be crossed. This book from the author of *Atlas of Science* describes the power of topical maps, providing readers with principles for visualizing knowledge and offering as examples forty large-scale and more than 100 small-scale full-color maps. Today data literacy is becoming as important as language literacy. Well-designed visualizations can rescue us from a sea of data, helping us to make sense of information, connect ideas, and make better decisions in real time. In *Atlas of Knowledge*, leading visualization expert Katy Borner makes the case for a systems science approach to science and technology studies and explains different types and levels of analysis. Drawing on fifteen years of teaching and tool development, she introduces a theoretical framework meant to guide readers through user and task analysis, data preparation, analysis, and visualization, visualization deployment, and the interpretation of science maps. To exemplify the framework, the Atlas features striking and enlightening new maps from the popular *Places, Spaces, Mapping Science* exhibit that range from Key Events in the Development of the Video Tape Recorder to Mobile Landscapes, Location Data from Cell Phones for Urban Analysis to Literary Empires, Mapping Temporal and Spatial Settings of Victorian Poetry to Seeing Standards: A Visualization of the Metadata Universe. She also discusses the possible effect of science maps on the practice of science.
