Cogan, 2012-03-16 The book Systems Engineering Practice and Theory is a collection of articles written by developers and

researches from all around the globe. Mostly they present methodologies for separate Systems Engineering processes, others consider issues of adjacent knowledge areas and sub areas that significantly contribute to systems development, operation and maintenance. Case studies include aircraft, spacecrafts and space systems development, post analysis of data collected during operation of large systems etc. Important issues related to bottlenecks of Systems Engineering such as complexity, reliability and safety of different kinds of systems, creation, operation and maintenance of services system, human communication and management tasks done during system projects are addressed in the collection. This book is for people who are interested in the modern state of the Systems Engineering knowledge area and for systems engineers involved in different activities of the area. Some articles may be a valuable source for university lecturers and students, most of case studies can be directly used in Systems Engineering courses as illustrative materials. Fulltext Sources Online, 2007-07 Information Sources in Engineering Ken W. Mildren, Peter J. Hicks, 1996. This guide presents an updated evaluation of sources from reports, journals to bibliographies, reviews for engineering information. Topics covered include energy, technology, nuclear power, engineering, fluid mechanics, fluid power, systems design, ergonomics, biomedical engineering, more. Advances in Feature Based Manufacturing Jami J. Shah, Martti Mäntylä, Dana S. Nau, 1994. Well known researchers in all areas related to featured based manufacturing have contributed chapters to this book. Some of the chapters are surveys while others review a specific technique. All contributions including those from the editors were thoroughly refereed. The goal of the book is to provide a comprehensive picture of the present stage of development of Features Technology from the point of view of applications in manufacturing. The book is aimed at several audiences. Firstly it provides the research community with an overview of the present state of the art features in manufacturing along with references in the literature. Secondly the book will be useful as supporting material for a graduate level course on product modeling and realization. Finally the book will also be valuable to industrial companies who are assessing the significance of features for their business.
