Donna Fitzpatrick

Sunshine State Standard- SC.A.1.4.1 The student knows that the electron configuration in atoms determines how a substance reacts and how much energy is involved in its reactions.

Make a board game that may be used to practice electron configurations. The game may use a strategy and set of rules for an existing game, or it may be something totally original. It must include in it either game pieces such as cards that show the configurations of selected elements, or require the player to draw, write, or identify electron configurations, with the correct answers incorporated into the rules. Some suggestions for games that have worked well in the past-
Chemopoly- some variation on monopoly in which players vie to "buy" or otherwise control elements by landing on their space and writing the configuration.
