A Practical Guide to MR-Linac Indra J. Das, Filippo Alongi, Poonam Yadav, Bharat B. Mittal, 2024-03-20 This book offers a detailed guide to MR Linac a unique and fast growing radiation treatment modality MR linac is new technology that is a fusion of an MRI and a linear accelerator on the same gantry It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment Tumor location changes moment to moment as radiation is delivered but this cannot be visualized in current radiation therapy practices This new and rapidly growing technology can provide adaptive therapy that was not possible before This book presents current knowledge on MR linac technology clinical practices and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor There are two commercial MR linac machines under consideration and both will be covered in detail The book is divided into four sections The first gives a general introduction to MR Linac covering the role of MRI in radiation oncology the clinical necessity of this technology and patient selection The next section details the physics and technology of MR Linac covering image sequence motion management and treatment planning Section three offers the clinical applications of MR Linac and is divided by body area including lung prostate and breast Finally the fourth section looks to the future and what this technology can mean for radiation oncology This is an ideal guide for radiation oncologists medical physicists and relevant trainees

Handbook of Radiotherapy Physics Philip Mayles, Alan E. Nahum, J.C. Rosenwald, 2021-12-30 From the essential background physics and radiobiology to the latest imaging and treatment modalities the updated second edition of Handbook of Radiotherapy Physics Theory Practice covers all aspects of the subject In Volume 1 Part A includes the Interaction of Radiation with Matter charged particles and photons and the Fundamentals of Dosimetry with an extensive section on small field physics Part B covers Radiobiology with increased emphasis on hypofractionation Part C describes Equipment for Imaging and Therapy including MR guided linear accelerators Part D on Dose Measurement includes chapters on ionisation chambers solid state detectors film and gels as well as a detailed description and explanation of Codes of Practice for Reference Dose Determination including detector correction factors in small fields Part E describes the properties of Clinical external Beams The various methods or algorithms for Computing Doses in Patients irradiated by photon electron and proton beams are described in Part F with increased emphasis on Monte Carlo based and grid based deterministic algorithms In Volume 2 Part G covers all aspects of Treatment Planning including CT MR and Radionuclide based patient imaging Intensity Modulated Photon Beams Electron and Proton Beams Stereotactic and Total Body Irradiation and the use of the dosimetric and radiobiological metrics TCP and NTCP for plan evaluation and optimisation Quality Assurance fundamentals with application to equipment and processes are covered in Part H Radionuclides equipment and methods for Brachytherapy and Targeted Molecular Therapy are covered in Parts I and J respectively Finally Part K is devoted to Radiation Protection of the public staff and patients Extensive tables of Physical Constants Photon Electron and

Proton Interaction data and typical Photon Beam and Radionuclide data are given in Part L Edited by recognised authorities in the field with individual chapters written by renowned specialists this second edition of Handbook of Radiotherapy Physics provides the essential up to date theoretical and practical knowledge to deliver safe and effective radiotherapy It will be of interest to clinical and research medical physicists radiation oncologists radiation technologists PhD and Master s students
