## Answer Key

**Vocabulary:** adaptation, allele, chromosome, evolution, fitness, gene, genotype, mutation, natural selection, phenotype, trait

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

*[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]*

- Imagine a white lizard and a brown lizard sitting on a brown rock. A hawk is circling overhead hunting for its next meal. Which lizard do you think the hawk would most likely try to catch? Explain your choice.

*Answers will vary. [The hawk will most likely try to catch the white lizard because it is not as well camouflaged as the brown lizard.]*

- Now imagine that the same two lizards were sitting on a dune of white sand. Which lizard do you think the hawk would then most likely try to catch? Why?

*Answers will vary. [The hawk will most likely try to catch the brown lizard in this case because it is not as well camouflaged as the white lizard.]*

### Gizmo Warm-up

How long could a parrot survive in Antarctica? It would probably not survive long. Parrots do not have **adaptations**—or helpful characteristics—to survive icy cold weather. Because of this, a parrot is not fit for Antarctica. **Fitness** describes how well an organism can survive and reproduce in an environment.

In the *Evolution: Mutation and Selection* Gizmo™, you will see how a species' fitness can change over time as it becomes better adapted to its environment.

- On the SIMULATION pane, what is the **Average fitness** of the population? **50%**
- On the CONTROLS pane, experiment with the **Background color** sliders.
  - Which background color results in the highest fitness?  **$R = 255, G = 255, B = 255$**
  - Which background color results in the lowest fitness?  **$R = 0, G = 0, B = 0$**

*Probability's Nature And Nature's Probability - Lite* Donald E. Johnson,2009-10 This is the sequel to the well received *Probability's Nature And Nature's Probability* which was written in depth for Scientist and Professionals This new book has the same wonderful foundation but has been revised and put into layman's terms so anyone can understand it The author once believed anyone not accepting the proven evolutionary scenario that was ingrained during his science education was of the same mentality as someone believing in a flat earth With continued scientific investigation paying closer attention to actual data rather than speculative conclusions he began to doubt the natural explanations that had been so ingrained in a number of key areas including the origin and fine tuning of mass and energy the origin of life with its complex information content and the increase in complexity in living organisms It was science and not religion that caused his disbelief in the explanatory powers of undirected nature The fantastic leaps of faith required to accept the undirected natural causes in these areas demand a scientific response to the scientific sounding concepts that in fact have no known scientific basis Scientific integrity needs to be restored so that ideas that have no methods to test or falsify are not considered part of science Too often possible is used by scientists without considering that possible has a scientific definition within the nature of probability For example one should not be able to get away with stating it is possible that life arose from non life by or it's possible that a different form of life exists elsewhere in the universe without first demonstrating that it is indeed possible non zero probability using known science One could of course state it may be speculated that but such a statement wouldn't have the believability that its author intends to convey by the pseudo scientific pronouncement This book reviews the many prevalent scenarios that are widely accepted but need closer examination of their scientific validity It will also examine the

scientific validity of Intelligent Design ID as a model that can be empirically detected and examined For example the book uses known science including Shannon and Functional information principles to prove that it is impossible zero probability for life s complex information system to have an undirected natural source The usefulness of the ID model for furthering scientific inquiry is also analyzed One chapter is devoted to exposing fallacies presuppositions and beliefs that attempt to prevent acceptance of ID as science American Scientist ,1942
