

Lesson 9: Quadratic inequalities

6 Steps on Solving Quadratic Inequalities

1. Change the inequality to quadratic equation (standard form).
2. Solve the quadratic equation. Find the value of x.
3. Plot the boundary points on number line.
4. Pick a value of x within each identified interval and then test.
5. Identify the interval that satisfies the inequality.
6. Draw the graph down.

$x^2 - 7x + 12 > 0$
 factoring first then
 $(x - 4)(x - 3) > 0$
 $x = 4 ; x = 3$
 $(-\infty, 3) \cup (3, 4) \cup (4, +\infty)$
 substitute it on the value of x
 for $(-\infty, 3)$, if $x = 0$ then,
 $x^2 - 7x + 12 > 0$
 $0^2 - 7(0) + 12 > 0$
 $12 > 0$ RIGHT
 for $(3, 4)$, if $x = 3.5$ then,
 $x^2 - 7x + 12 > 0$
 $3.5^2 - 7(3.5) + 12 > 0$
 $12.25 - 24.5 + 12 > 0$
 $-0.25 > 0$ WRONG
 for $(4, +\infty)$, if $x = 5$ then,
 $x^2 - 7x + 12 > 0$
 $5^2 - 7(5) + 12 > 0$
 $25 - 35 + 12 > 0$
 $2 > 0$ RIGHT

Lesson 10: Graphing Linear Inequalities

1. Write the equation in slope-intercept form.
 2. Graph the boundary line.
 3. Test a point in the region above and below the boundary line.
 4. Shade the region that satisfies the inequality.

- Graphing Linear Inequalities**
 1. Write the inequality in slope-intercept form.
 2. Graph the boundary line.
 3. Test a point in the region above and below the boundary line.
 4. Shade the region that satisfies the inequality.

Example:
 $y < 2x + 3$

- Graphing Linear Inequalities**
 1. Write the inequality in slope-intercept form.
 2. Graph the boundary line.
 3. Test a point in the region above and below the boundary line.

 4. Shade the region that satisfies the inequality.

HOW TO SOLVE A PROBLEM?

- Y is directly proportional to X, such that Y=18 when X=3.

- a. Find the equation relating Y to X.

$$k = \frac{Y}{X}$$

- b. Find Y if X=5.

$$Y = kX$$

$$Y = 6(5)$$

$$Y = 30$$

- c. Find X if Y=24.

$$X = \frac{Y}{k} \quad X = \frac{24}{6} \quad X = 4$$

Lesson 12: Indirect Variation

- Indirect Variation** - a relationship between two variables where the product of the variables is constant.

1. Write the equation in slope-intercept form.
 2. Graph the boundary line.
 3. Test a point in the region above and below the boundary line.
 4. Shade the region that satisfies the inequality.

Example:
 $xy = 12$

Graphing Linear Inequalities
 1. Write the inequality in slope-intercept form.
 2. Graph the boundary line.
 3. Test a point in the region above and below the boundary line.
 4. Shade the region that satisfies the inequality.

- Graphing Linear Inequalities**
 1. Write the inequality in slope-intercept form.
 2. Graph the boundary line.

Cultivating Knowledge Scott Tunison, 2016-07-27 Over the last decade or two there has been increasing consensus that academic research if used judiciously to guide practice improves both educational policy and pedagogy ultimately leading to better outcomes for students Yet despite this potential there remains a deep ravine between the body of knowledge built through research especially at the intersection between specific interventions and improved student achievement and the actions taken by policy makers administrators and classroom teachers in their regular practice There are myriad reasons for this research practice divide Among them is that it is difficult for district based people to access primary research Furthermore multiple waves of well intentioned research based but largely unsuccessful school reform efforts have resulted in skepticism among practitioners about research and at the same time damaged researchers credibility in the field This book is divided into three broad areas First it develops an engaging analysis of the root causes for the research practice gap in education Second it describes the framework developed and used in a public school district by the author to address the root causes and provides evidence of its efficacy to facilitate greater incorporation of research into school and district level practice Through a process the author calls Knowledge Cultivation the framework uses weekly research summaries for district leaders that are relevant to their real time issues along with suggestions about ways in which the research might be useful The final section of the book includes the actual research summaries used by the author over a five year period

Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of

linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing
