**Pedagogies of Biomedical Science** Donna Johnson, 2024-05-31 This book confronts the continually evolving nature of biomedical science education by providing a robust account of learning pedagogies and best practice for scholars and researchers in the field Rather than considering subdisciplines of biomedical science education separately the volume takes a

holistic approach and considers the complexities of teaching biomedical science as a whole providing a nuanced overview of how a particular practice fits in such a course overall as well as providing support for development within the reader's own subdiscipline. Ultimately, this holistic approach allows for expansive discussion of relevant pedagogical approaches that will directly inform innovations in the contemporary teaching of biomedical science education. Novel in approach and underpinned by the latest in research innovations, this book will appeal to scholars, researchers, and postgraduate students in the fields of medical education, higher education, and curriculum studies. Policy makers involved with health education and promotion, as well as educational research, will also benefit from the volume.

**Children and Companion Animals: Psychosocial, Medical, and Neurobiological Implications** Andrea M. Beetz, Lynette A. Hart, Brinda I. Jegatheesan, Naoko Koda, 2018-08-16. Children and companion animals seem to have a natural affinity towards each other. Most children desire a relationship with their own companion animals or at least demonstrate an interest to interact with animals in general. Living with companion animals or interacting with animals may have psychosocial, neurobiological, or medically relevant effects on typically developing children and juveniles, as well as those with diverse and special needs. In this eBook, we present several articles addressing the relationships between children, juveniles, and animals in different countries, including Austria, Germany, Jamaica, Japan, the United Kingdom, and the United States. Three articles discuss approaches in animal-assisted education, including animal keeping and animal-assisted interventions in schools, and an experimental study investigating immediate effects of dogs on reading competence and accompanying stress reactions with cortisol and behavior. Other articles address topics involving children and their companion animals, including dog walking by children and juveniles, risks of dog bites by the family dog, selection of pet dogs for families with a child with autism spectrum disorder (ASD), and the relationships that children with ASD have with their family cats. The interactions between children, juveniles, and animals addressed in this eBook provide new insights into some scarcely investigated themes and underline the significance of animals in children's lives.
