**The Pragmatist** Joseph P. Viteritti, 2017-08-03 The two main characters of Joseph P Viteritti s *The Pragmatist* Bill de Blasio and New York City itself are used to tell the story of the rise fall and rebirth of progressivism in America s major urban center and in the process introduce us to the contributions and distractions of every mayor since La Guardia demonstrating that the road to progress was never a direct journey

**Linguistic Influences on Mathematical Cognition** Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing

are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

Risk, Resilience, and Recovery Across Global Education Systems Louis Volante, Kristof De Witte, Orazio Giancola, Luca Salmieri, Don A. Klinger, 2026-01-22 This book provides a critical review of the long term effectiveness of education and social protection policies enacted by G10 countries in response to the global pandemic The COVID 19 pandemic caused the most significant disruption to education systems since the devastation of World War II Successive waves and variants of the coronavirus resulted in school closures and spurred a range of policy interventions across national education systems to combat both the cognitive i e achievement in reading mathematics and science and non cognitive socioemotional development mental and physical health impacts on student achievement and wellbeing This book aims to evaluate the long term efficacy of such interventions drawing on an analysis of a cross section of nine industrialized countries the United Kingdom France Germany Italy Sweden Netherlands Belgium Canada and Japan It further offers cross national insights for policymakers and discusses the critical importance of broader notions of academic resilience in a post pandemic world Ultimately this volume aims to identify national policies that have helped to buffer students from the long term challenges associated with the aftermath of the pandemic A timely and important text it will be of interest to researchers and policymakers in education policy pandemic response impact evaluation and student mental health
