Graphing Hyperbolas Key Chapter 11:

Make: Trigonometry Joan Horvath, Rich Cameron, 2023-08-21 Trigonometry has 2000 year old roots in everyday useful endeavors like finding the size of an object too big or far away to measure directly or navigating from Point A to Point B. However it is often taught very theoretically with an emphasis on abstractions. Make Trigonometry uses 3D printable models and readily available physical objects like wire and cardboard tubes to develop intuition about concepts in trigonometry and basic analytic geometry. Readers will imagine the thought process of the people who invented these mathematical concepts and can try out math experiments to see for themselves how ingenious ancient navigators and surveyors really were. The analytic geometry part of the book links equations to many of these intuitive concepts which we explore through in depth explanations of manipulative models of conic sections. This book is aimed at high school students who might be in Algebra II or Pre Calculus. It shows the geometrical and practical sides of these topics that otherwise can drown in their own algebra. Make Trigonometry builds on the basics of the authors earlier book Make Geometry and is intended as a bridge from that book to their Make Calculus book. The user can read this book and understand the concepts from the photographs of 3D printable models alone. However since many models are puzzle like we encourage the reader to print the models on any consumer grade filament based 3D printer. The models are available for download in a freely available open source repository. They were created in the free program OpenSCAD and can be 3D printed or modified by the student in OpenSCAD to learn a little coding along the way.

Functions and Graphs James Tanton, 2018 A playful readable and thorough guide to precalculus this book is directed at readers who would like a holistic look at the high school curriculum material on functions and their graphs. The exploration is presented through problems selected from the history of the Mathematical Association of America's American Mathematics Competition.

Mathematics for Secondary School Teachers Elizabeth G. Bremigan, Ralph J. Bremigan, John D. Lorch, 2011 Mathematics for Secondary School Teachers discusses topics of central importance in the secondary school mathematics curriculum including functions polynomials trigonometry exponential and logarithmic functions number and operation and measurement. Acknowledging diversity in the mathematical backgrounds of pre service teachers and in the goals of teacher preparation programs the authors have written a flexible text through which instructors can emphasize any of the following Basics exploration of key pre college topics from intuitive and rigorous points of view. Connections

exploration of relationships among topics using tools from college level mathematics Extensions exploration of college level mathematical topics that have a compelling relationship to pre college mathematics Mathematics for Secondary School Teachers provides a balance of discovery learning and direct instruction Activities and exercises address the range of learning objectives appropriate for future teachers Beyond the obvious goals of conceptual understanding and computational fluency readers are invited to devise mathematical explanations and arguments create examples and visual representations remediate typical student errors and misconceptions and analyze student work Introductory discussion questions encourage prospective teachers to take stock of their knowledge of pre college topics A rich collection of exercises of widely varying degrees of difficulty is integrated with the text Activities and exercises are easily adapted to the settings of individual assignments group projects and classroom discussions Mathematics for Secondary School Teachers is primarily intended as the text for a bridge or capstone course for pre service secondary school mathematics teachers It can also be used in alternative licensure programs as a supplement to a mathematics methods course as the text for a graduate course for in service teachers and as a resource and reference for in service faculty development **New York Math: Math B** ,2000
