The Structural Engineer, 2000 *The British National Bibliography* Arthur James Wells, 2009 *Proceedings of Italian Concrete Days 2018* Marco di Prisco, Marco Menegotto, 2019-09-04 This book gathers the best peer reviewed papers presented at the Italian Concrete Days national conference held in Lecco Italy on June 14 15 2018 The conference topics encompass the aspects of design execution rehabilitation and control of concrete structures with particular reference to theory and modeling applications and realizations materials and investigations technology and construction techniques The contributions amply demonstrate that today s structural concrete applications concern not only new constructions but more and more rehabilitation conservation

strengthening and seismic upgrading of existing premises and that requirements cover new aspects within the frame of sustainability including environmental friendliness durability adaptability and reuse of works and or materials As such the book represents an invaluable up to the minute tool providing an essential overview of structural concrete as well as all new materials with cementitious matrices *Planning and design handbook on precast building structures* FIB - Féd. Int. du Béton,2014 In 1994 fib Commission 6 Prefabrication edited a successful Planning and Design Handbook that ran to approximately 45 000 copies and was published in Spanish and German Nearly 20 years later Bulletin 74 brings that first publication up to date It offers a synthesis of the latest structural design knowledge about precast building structures against the background of 21st century technological innovations in materials production and construction With it we hope to help architects and engineers achieve a full understanding of precast concrete building structures the possibilities they offer and their specific design philosophy It was principally written for non seismic structures The handbook contains eleven chapters each dealing with a specific aspect of precast building structures The first chapter of the handbook highlights best practice opportunities that will enable architects design engineers and contractors to work together towards finding efficient solutions which is something unique to precast concrete buildings The second chapter offers basic design recommendations that take into account the possibilities restrictions and advantages of precast concrete along with its detailing manufacture transport erection and serviceability stages Chapter three describes the precast solutions for the most common types of buildings such as offices sports stadiums residential buildings hotels industrial warehouses and car parks Different application possibilities are explored to teach us which types of precast units are commonly used in all those situations Chapter four covers the basic design principles and systems related to stability Precast concrete structures should be designed according to a specific stability concept unlike cast in situ structures Chapter five discusses structural connections Chapters six to nine address the four most commonly used systems or subsystems of precast concrete in buildings namely portal and skeletal structures wall frame structures floor and roof structures and architectural concrete facades In chapter ten the design and detailing of a number of specific construction details in precast elements are discussed for example supports corbels openings and cutouts in the units special features related to the detailing of the reinforcement and so forth Chapter eleven gives guidelines for the fire design of precast concrete structures The handbook concludes with a list of references to good literature on precast concrete construction

Timber Connections Rohana Hassan,Azmi Ibrahim,Zakiah Ahmad,2023-04-19 This book describes the application of mathematical and fundamental theory as stated in the relevant standards namely EYM and NDS Timber is one of the important building materials in the field of engineering other than concrete and steel However there is still a lot of unexplored knowledge about timber including how timber connections are made One of the main types of timber connection is mortise and tenon Mortise and tenon are widely seen as one of the most important traditional timber structural joint In order to understand the load carrying capacity and

performance of the structural mortise and tenon joint the existing theoretical background of timber joint design is made as a reference Current equations applicable in estimating the load carrying capacity of timber joint uses the European Yield Model EYM Therefore the main aim of this book is to share the basic design knowledge inclusive of safety factor limitations as engineering main factor in structural design The Architects' Journal ,1998 **Whitaker's Books in Print** ,1998
