**Measuring Health 4th edition** is essential reading for researchers and upper-level undergraduates and postgraduates in health services research, health studies, health sciences, public health and social sciences. Ann Bowling's book provides an up-to-date and coherent guide and assessment of measurement tools which is comprehensible and well-organised.

Virginia Berridge, Professor of History and Director, Centre for History in Public Health, London School of Hygiene and Tropical Medicine, UK. In her latest edition of **Measuring Health: A Review of Subjective Health, Well-Being and Quality of Life Measurement Scales**, Professor Ann Bowling has once again provided us with an essential for our bookshelves. It is a vital resource for anyone investigating health and well-being, whether novice student researcher or experienced academic. Written in an accessible, easy-to-use style, we are initially taken through the importance of measuring and understanding lay people's experiences of their physical and social health. The mechanics and challenges of measurement of subjective health are then described. Later chapters include handy definitions of relevant concepts and detailed descriptions of specific scales, both familiar and relatively new ones, including psychometric testing and use. This text is packed with useful information and can be used both as a resource for an overall understanding of measuring health and well-being or for selecting specific patient-based health scales for research projects.
