Ahamad, Ruhizal Roosli, Muhammad Rusdi, 2018-11-14 A mixed methods research study is where the researcher s combines elements of qualitative and quantitative research approaches by converging different data sources However such

triangulation of data is not in itself a method in the same way as a quantitative or qualitative approach with a specific paradigm. Triangulation is a plan structure and investigation strategy deployed to obtain answers to problems identified at an earlier stage and widely used by researchers due to its capability in cross checking the validity of findings and its minimal risk of bias. This book focuses on how to combine quantitative with qualitative methods in a real research project. This study evaluates the suitability of land for development in Banda Aceh, Indonesia. It takes into account the risk of disaster and the social implications for settlement in this area. Although there are a number of publications which discuss general research guidelines and methods, there is a notable lack of books in the social sciences which provide an example of integrating quantitative and qualitative methods in one research project. As such, this book will be useful to students, academicians, and practitioners conducting research work.

A Research Guide to Cartographic Resources Eva H. Dodsworth, 2018-09-22. The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields. *A Research Guide to Cartographic Resources* navigates the numerous American and Canadian cartographic resources available in print and online, offering researchers, academics, and students with information on how to locate and access the large variety of resources, new and old. Dozens of different cartographic materials are highlighted and summarized, along with lists of map libraries and geospatial centers and related professional associations. *A Research Guide to Cartographic Resources* consists of 18 chapters, two appendices, and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides, including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data, and other related material. Almost all of the resources listed in this guide are categorized by geography, down to the county level, making efficient work of the type of material required to meet the information needs of those interested in researching place-specific cartographic-related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas but also get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers, and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries, as well as comprehensive lists of geospatial datasets, down to the county level. This volume combines the traditional and historical collections of cartography with the modern applications of GIS-based maps and geospatial datasets.
