Globalized Freight Transport T. R. Leinbach, 2007-01-01 The editors as well as the authors of these essays should be commended for bringing together and discussing within this volume many of the important issues facing globalized freight movements Robert Martin The Professional Geographer Leinbach and Capineri have produced an interesting and useful addition to the literature on this massive subject Anthony Beresfore International Journal of Maritime History Globalization is a fashionable issue But solid research on the conditions and implications for freight transport is badly missing This volume contains a unique set of high quality contributions on freight transport in the age of globalization It offers a wealth of original insights to both the research and policy making community Peter Nijkamp VU University Amsterdam The Netherlands The worldwide movement of freight has emerged as one of the most critical and dynamic aspects of the transport sector The contributors to this study examine the current state of global freight transport with an emphasis on Europe and North America and their extra regional linkages These original contributions synthesize existing knowledge highlight new developments problems and possible solutions and underscore the need for further research The book s starting point is the fact that freight transport is the main element supporting global supply and commodity chains from the transformation of raw materials to market distribution and after market services However as the authors point out the rising costs associated with security and various other constraints as well as the complexity of getting goods delivered is adding to profit pressures faced by manufacturers around the globe Despite the application of technology and increasingly efficient solutions to the movement of freight constraint points and conditions obstructing smooth operations and sustainability have developed These difficulties affect both the environment and economic growth Examining the issues from four critical perspectives intermodality e commerce and technology logistics and sustainability Globalized Freight Transport captures the concern for the viability of freight systems and the ways they are impacting the global economy This cutting edge study will be of great interest to students and scholars of transportation as well as to public sector policymakers and private sector managers

The Globalization of American Infrastructure Matthew Heins, 2016-01-29 This book gives an account of how the U S freight transportation system has been impacted and globalized since the 1950s by the presence of the shipping container A globally standardized object the container carries cargo moving in international trade and it utilizes and fits within the existing transportation infrastructures of shipping trucking and railroads In this way it binds them together into a nearly seamless worldwide logistics network This process occurs not only in ocean shipping and at ports but also deep within national territories In its dependence on existing infrastructural systems though the network of container movement as it pervades domestic space is shaped by the history and geography of the nation state This global network is not invariably imposed in a top down manner to a large degree it is cobbled together out of national regional and local systems Heins describes this in the American context examining the freight transportation infrastructures of railroads trucking and inland

waterways and also the terminals where containers are transferred between train and truck The book provides a detailed historical narrative and is also theoretically informed by the contemporary literature on infrastructure and globalization

United States and Maritime Shipping Emissions Policies Michael Podesta, 2017-02-08 Seminar paper from the year 2016 in the subject Politics Environmental Policy grade A University of Michigan language English abstract The maritime freight industry is a major contributor to global greenhouse gas emissions If current practices continue experts predict that it will account for 17% of total emissions by 2050 Both the United States government and the International Maritime Organization have enacted strict regulations to promote the industry's adoption of alternative sources of fuel in an effort to reduce the amount of sulfur oxides and other pollutants released from container ships This research sought to connect whether or not the United States and International Maritime Organization sulfur fuel enforcements have allowed container ship companies to catalyze an industry wide shift in shipping practices To answer my questions I analyzed relevant container ship policies by the United States government within the last ten years as well as regulations in place by the International Maritime Organization specifically addressing sulfur level reduction I then analyzed the archives of container ship companies in search of sustainability initiatives or alternative fuel adoption underway In gathering results I found evidence suggesting the United States federal government has enacted sufficient standards in attempting to limit sulfur emissions from container ship engines within its coastlines Additionally I recognized that the International Maritime Organization is committed to reducing sulfur emissions in the fastest way possible by establishing Emission Control Areas in coastlines as well as instituting tight regulations to limit sulfur content in ship fuel Third reports show that the industry is struggling to adopt clean fuel due to high market costs and demand but have been able to meet the fuel standards through alternative and cheaper methods These results are applicable to only container ships or vessels of that size as smaller vessels have different engine standards Moreover this research was concerned specifically with North American standards meaning that the same results may not be found in other areas of the world The research I conducted serves as insight for the public into a relatively unknown aspect of transportation related environmental issues It also functions as a platform upon which the dangers of human caused climate change can be addressed International Journal of Maritime History, 2007 **Journal of Economic Literature**, 2007 Transport Geographies Richard Knowles, Jon Shaw, Iain Docherty, 2008 Brings together a range of expert insight to introduce the key ideas concepts and themes of transport geography This text explores the relationship between transport geography and geographical concerns as well as connections to other areas of study economics engineering environmental studies political science and spatial planning **Globalization [2 Volumes]** Ashish Vaidya, 2006 This work is a comprehensive collection of cutting edge scholarship on the economic international business political legal and environmental ramifications of globalization one of the hottest topics of the day International trade is as old as nations During the last five decades however advances in technology and transportation have changed the scope and method of international trade Disputes rage about the effects of these changes advocates for different positions offer argument but little factual or theoretical analysis Globalization offers all the information readers need to sort out the arguments Written with the

highest degree of scholarship intended for college students or working professionals the encyclopedia provides both introductory material to broad economic legal political and environmental theory and in depth analysis of how theory interacts with practice in the framework of global trade A trader in New York can in a matter of seconds execute a billion dollar currency transaction in Hong Kong What does this transaction mean to New Yorkers to residents of Hong Kong and to the rest of the world This book gives readers the tools to answer those questions 100 A Z entries covering the major issues of globalization Reproduces the founding documents for the World Trade Organization and other international trade organizations Maps of trade blocs and regional organizations such as the European Union Association of Southeast Asian Nations ASEAN and Mercado Com n del Sur MERCOSUR Charts figures and graphs illustrating data trends and statistical information Includes contributions from more than 100 specialists in economics law business and other applicable fields

Globalization and Restructuring of African Commodity Flows Niels Fold, Marianne Nylandsted Larsen, 2008 The increasing global interaction between functionally integrated foci of production and services has affected Africa in ways that are changing the material foundations of economic and social life on the continent These processes are not uniform throughout Africa but affect local national and regional actors and institutions in diverse and complex ways The aim of this book is to grasp the diversity of these globalization processes in a systematic way by adopting a common analytical framework the Global Value Chain approach Commodity specific data in two or more countries are taken as a point of departure and the variations and similarities in linkages between local national regional and global chain segments are examined The book is based on original quantitative and qualitative data collected during fieldwork by the authors **IATSS Research**, 2005

Structural Change in Transportation and Communications in the Knowledge Society Kiyoshi Kobayashi, T. R. Lakshmanan, William Peter Anderson, 2006 The transformation of the world economy from a system of nations trading materials intensive goods to a system of seamless global networks for information intensive goods and services has created the need for a comprehensive restructuring of transportation and communications activities The contributors transportation and communications analysts from Japan and the United States address this restructuring from a variety of perspectives ranging from theoretical treatments of the role of information in the economy to applications of communications technologies for the collection of travel data The authors transcend traditional methods of transportation and communication analysis in order to address emerging issues that are not well represented by the prevailing cost benefit framework Many draw from advances in social sciences such as game theory that recognize the interdependence of human decision making New ways of assessing the economic benefit of infrastructure and the evolving role of institutions in the information economy are demonstrated along with novel approaches to analyzing human mobility and interaction in a knowledge rich environment By moving beyond traditional forms of analysis that were better suited to an earlier time the chapters in this book provide a wealth of insights for policy formulation in the globalized knowledge economy This comprehensive volume will be of great

value to regional scientists and economic geographers as well as civil engineers economists and analysts interested in transportation and communications

Review of Developments in Transport and Communications in the ESCAP Region, 1996-2001 United Nations. Economic and Social Commission for Asia and the Pacific,2001 This publication provides a review of progress made in the transport sector in the ESCAP region since 1996 Over this period the development of roads railways shipping ports inland waterways and the air transport sector has shown significant though uneven progress in the region While the financial crisis of 1997-1998 has to a degree eased the strains on transport infrastructure to meet rapidly rising demand the increasing scarcity of financial resources appears to have accelerated institutional changes and changes in infrastructure financing

Decision-making on Mega-projects Hugo Priemus,Bent Flyvbjerg,Bert van Wee,2008 This book enlarges the understanding of decision making on mega projects and suggest recommendations for a more effective efficient and democratic approach Authors from different scientific disciplines address various aspects of the decision making process such as management characteristics and cost benefit analysis planning and innovation and competition and institutions The subject matter is highly diverse but certain questions remain at the forefront For example how do we deal with protracted preparation processes how do we tackle risks and uncertainties and how can we best divide the risks and responsibilities among the private and public players throughout the different phases of the project Presenting a state of the art overview based on experiences and visions of authors from Europe and North America this unique book will be of interest to practitioners of large scale project management politicians public officials and private organisations involved in mega project decision making It will also appeal to researchers consultants and students dealing with substantial engineering projects complex systems project management and transport infrastructure

Freight Transport and the Modern Economy Michel Savy,June Burnham,2013-06-26

Freight Transport and the Modern Economy adapts a well known textbook by Michel Savy revising extending and updating it for British European and international readers It deals not only with the technical aspects of transport logistics and supply chain management but also the interactions between transport professionals and the public authorities in the modern social political economic and environmental context The transport of freight is presented as a system mixing empirics and theory showing how transport itself functions and also its strong influence on the modern economy with a growing volume of production turnover and employment The nature of freight transport an industrial process widely marketed as a service is analysed in depth explaining the main characteristics of the transport operation its market and the regulatory context The main actors the professional actors carriers shippers and other agents and the public authorities are introduced and their behaviour and interactions are clarified This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers customers logistics managers political decision makers and

citizens to tackle long range issues such as the decoupling of production and transport recommended by some institutions and experts and to explore the need for more infrastructure or the capacity of the freight transport industry to reduce its contribution to pollution and climate change This book treats freight transport as a whole system in its technical economic social political and environmental context in contrast to existing transport literature focused on individual aspects such as transportation planning usually for cars or passengers logistics essentially management issues or individual transport modes This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives

Sharing the Gains of Globalization in the New Security Environment ,2003 This document is about the idea that policy dialogue is important for the establishment of a system of international trade facilitation which would contribute to equitable development worldwide Trade facilitation looks at the problems that come from inefficient trade procedures which incur high transaction costs These hinder trade and economic growth as well as the adoption of cutting edge technologies worldwide The UNECE has developed and promoted trade facilitation standards and measures for more than 40 years and is aiming to build on this to foster dialogue for the construction of a fair predictable and secure international trading system In 2002 and 2003 two international forums on trade facilitation were organized the papers of the May 2003 Forum are presented in this document
