Reconfigurable Architectures and Design Automation Tools for Application-Level Network Security Sascha Mühlbach,2015-04-30 The relevance of the Internet has dramatically grown in the past decades However the enormous financial impact attracts many types of criminals Setting up proper security mechanisms e.g. Intrusion Detection Systems IDS has therefore never been more important than today To further compete with today's data transfer rates 10 to 100 Gbit/s dedicated hardware accelerators have been proposed to offload compute intensive tasks from general purpose processors As one key technology reconfigurable hardware architectures e.g. the Field Programmable Gate Array FPGA are of particular interest to this end This work addresses the use of such FPGAs in the context of interactive communication applications which goes beyond the regular packet level operations often seen in this area To support rapid prototyping a novel FPGA platform NetStage has been designed and developed which provides a communication core for Internet communication and a flexible connection bus for attaching custom applications modules A hardware honeypot the MalCoBox has been set up as a proof of concept application Furthermore to address the ongoing issue of hardware programming complexity the domain specific Malacoda language for abstractly formulating honeypot packet communication dialogs is presented and discussed An associated compiler translates Malacoda into high performance hardware modules for NetStage Together NetStage and Malacoda address some of the productivity deficiencies often recognized as major hindrances for the more widespread use of reconfigurable computing in communications applications Finally the NetStage platform has been evaluated in a real production environment

Critique of Digitality Jan Distelmeyer,2022-10-12 Dealing with digitality is one of the most

urgent challenges of the present The increasing importance and spread of computer technology not only challenges societies and individuals this development also puts pressure on the concept of digitality which tries to grasp the totality and peculiarity of the conditions and consequences of electronic digital computing in all its forms However precisely because digitality is commonplace so should be its critique its analysis and assessment How can an analysis do justice to both fundamental characteristics and changing concrete forms infrastructures and practices How do the developments of a digitalization that programmatically encompasses forms of networking embedding and autonomization shape media cultures and societies How do artificial intelligence and algorithmic government relate to each other how does the immateriality of the digital fit with the materiality of computers How does the changing status and scope of this technology mediate itself This book introduces ongoing debates and develops its own approach to the critique of digitality asking about forms of interfaces and processes of governance This book is a translation of the original German 1st edition Kritik der Digitalit t by Jan Distelmeyer published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2021 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
