	External Ear The external ear consists of the pinna (auricle) and the ear canal. The pinna is the visible part of the ear that collects sound waves and directs them into the ear canal. The ear canal leads to the eardrum (tympanic membrane).	Middle Ear The middle ear is located behind the eardrum and contains three small bones: the malleus, incus, and stapes. These bones are responsible for transmitting sound vibrations from the eardrum to the inner ear.	Internal Ear The internal ear is located deep within the skull and contains the cochlea and the vestibular system. The cochlea is responsible for hearing, and the vestibular system is responsible for balance.	Common ENT Disorders Common ENT disorders include otitis media (middle ear infection), sinusitis (inflammation of the sinuses), and allergic rhinitis (hay fever).	ENT Examination The ENT examination involves a physical exam of the head and neck, including the ears, nose, and throat. The exam may include otoscopy (examining the ear canal and eardrum), rhinoscopy (examining the nasal cavity), and laryngoscopy (examining the larynx).	ENT History The ENT history includes a review of the patient's symptoms, medical history, and family history. The patient should be asked about any changes in hearing, voice, or breathing, as well as any recent infections or allergies.	ENT Physical Exam The ENT physical exam includes a visual inspection of the face and neck, palpation of the lymph nodes and thyroid gland, and auscultation of the lungs and heart. The exam may also include a hearing test and a speech test.	ENT Differential Diagnosis The differential diagnosis for ENT disorders includes infections, allergies, anatomical abnormalities, and neoplasms. The patient's history and physical exam findings will help the clinician narrow down the possibilities.	ENT Management The management of ENT disorders depends on the specific condition. Treatment may include antibiotics, decongestants, antihistamines, and surgery. The patient should be educated about the condition and the importance of follow-up care.	
	Nasal Cavity The nasal cavity is the part of the respiratory system that is located inside the nose. It is lined with mucous membranes and contains the olfactory epithelium, which is responsible for the sense of smell.	Sinuses The sinuses are air-filled cavities that are located within the bones of the face. They are connected to the nasal cavity and help to humidify and filter the air that we breathe.	Pharynx The pharynx is the part of the respiratory and digestive systems that is located at the back of the throat. It is a common pathway for both air and food.	Larynx The larynx is the part of the respiratory system that is located in the neck. It is responsible for the production of sound and the regulation of airflow into and out of the lungs.	Trachea The trachea is the windpipe, which is the part of the respiratory system that carries air from the larynx to the lungs. It is lined with cilia and mucus to help filter and warm the air.	Common ENT Disorders Common ENT disorders include sinusitis, allergic rhinitis, and laryngitis. The patient's history and physical exam findings will help the clinician narrow down the possibilities.	ENT History The ENT history includes a review of the patient's symptoms, medical history, and family history. The patient should be asked about any changes in breathing, voice, or swallowing, as well as any recent infections or allergies.	ENT Physical Exam The ENT physical exam includes a visual inspection of the face and neck, palpation of the lymph nodes and thyroid gland, and auscultation of the lungs and heart. The exam may also include a hearing test and a speech test.	ENT Differential Diagnosis The differential diagnosis for ENT disorders includes infections, allergies, anatomical abnormalities, and neoplasms. The patient's history and physical exam findings will help the clinician narrow down the possibilities.	ENT Management The management of ENT disorders depends on the specific condition. Treatment may include antibiotics, decongestants, antihistamines, and surgery. The patient should be educated about the condition and the importance of follow-up care.
	Throat The throat is the part of the respiratory and digestive systems that is located in the neck. It is a common pathway for both air and food.	Esophagus The esophagus is the part of the digestive system that carries food from the mouth to the stomach. It is lined with muscle and has a sphincter at the top to prevent food from coming back up.	Common ENT Disorders Common ENT disorders include laryngitis, pharyngitis, and esophagitis. The patient's history and physical exam findings will help the clinician narrow down the possibilities.	ENT History The ENT history includes a review of the patient's symptoms, medical history, and family history. The patient should be asked about any changes in voice, swallowing, or breathing, as well as any recent infections or allergies.	ENT Physical Exam The ENT physical exam includes a visual inspection of the face and neck, palpation of the lymph nodes and thyroid gland, and auscultation of the lungs and heart. The exam may also include a hearing test and a speech test.	ENT Differential Diagnosis The differential diagnosis for ENT disorders includes infections, allergies, anatomical abnormalities, and neoplasms. The patient's history and physical exam findings will help the clinician narrow down the possibilities.	ENT Management The management of ENT disorders depends on the specific condition. Treatment may include antibiotics, decongestants, antihistamines, and surgery. The patient should be educated about the condition and the importance of follow-up care.
