

Problem 10 (Lecture 10): Chapter 10

Consider the IVP $y'' + 2y' + 2y = 0$, $y(0) = 1$, $y'(0) = 0$. This IVP has a unique solution on \mathbb{R} . The solution $y(x)$ is the function that satisfies $y(0) = 1$, $y'(0) = 0$. The following statements are true: $y(1) = 0$, $y(2) = 0$, $y(3) = 0$, $y(4) = 0$, and $y(5) = 0$.

(a) Which of the following is a differential equation satisfied by $y(x)$, $y'(x)$, and $y''(x)$?

(b) Which of the following is a differential equation satisfied by $y(x)$, $y'(x)$, and $y''(x)$?

For this problem, you should use the other material you studied in Math 1B. Chapter 10.

H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24
Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector. Such systems are relevant for example in radar measurements where larger ranges involve higher noise level. This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions. Topics covered include convex H_2 and H_∞ norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information. Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas.

Introduction to Modern Economic Growth Daron Acemoglu, 2008-12-15
From Nobel Prize winning economist Daron Acemoglu an incisive introduction to economic growth. *Introduction to Modern Economic Growth* is a groundbreaking text from one of today's leading economists. Daron Acemoglu gives graduate students not only the tools to analyze growth and related macroeconomic problems but also the broad perspective needed to apply those tools to the big picture questions of growth and divergence. And he introduces the economic and mathematical foundations of modern growth theory and macroeconomics in a rigorous but easy to follow manner. After covering the necessary background on dynamic general equilibrium and dynamic optimization the book presents the basic workhorse models of growth and takes students to the frontier areas of growth theory including models of human capital endogenous technological change technology transfer international trade economic development and political economy. The book integrates these theories with data and shows

how theoretical approaches can lead to better perspectives on the fundamental causes of economic growth and the wealth of nations Innovative and authoritative this book is likely to shape how economic growth is taught and learned for years to come Introduces all the foundations for understanding economic growth and dynamic macroeconomic analysis Focuses on the big picture questions of economic growth Provides mathematical foundations Presents dynamic general equilibrium Covers models such as basic Solow neoclassical growth and overlapping generations as well as models of endogenous technology and international linkages Addresses frontier research areas such as international linkages international trade political economy and economic development and structural change An accompanying Student Solutions Manual containing the answers to selected exercises is available 978 0 691 14163 3 24 95 See <https://press.princeton.edu/titles/8970.html> For Professors only To access a complete solutions manual online email us at acemoglusolutions@press.princeton.edu
