1. A box containing 3 small bags of flour weighs 950 grams. Each bag of flour weighs 300 grams. How much does the empty box weigh?

$$300 + 300 + 300 = 900$$

$$950 - 900 = 50 \text{ g}$$

The empty box weighs 50 grams.

2. Mr. Cullen needs 91 carpet squares. He has 49 carpet squares. If the squares are sold in boxes of 6, how many more boxes of carpet squares does Mr. Cullen need to buy?

$$\begin{array}{r} 91 \\ - 49 \\ \hline 42 \end{array}$$

$$42 \div 6 = 7$$

Mr. Cullen needs to buy 7 more boxes.

## **Lesson 2 Answer Key Mathematical Model With Applications:**

**Evaluation and Extension of Mathematical Models of P2P Systems** Inna Kotchourova, 2008-03-11 Master's Thesis from the year 2007 in the subject Computer Science General grade 1-3 Technical University of Darmstadt language English abstract In this thesis existing mathematical models for P2P systems are presented and evaluated. Thereby the search efficiency in structured and unstructured P2P overlays, the features and restrictions in P2P streaming applications, the service capacity in P2P file sharing systems, content download and replication times in P2P networks, and many other issues are investigated. Furthermore, the new extended model possibly combining the most essential characteristics of P2P systems in a consistent way is presented. The characteristics observed in the new model are categorized in three groups according to the P2P system properties: being described, the overlay parameters, the characteristics of participating peers, and the resource and service characteristics. Thereafter, the objectives regulated by P2P applications, users and providers, and aspects of underlying P2P systems they are interested in are observed. We consider the P2P applications Skype, Joost, and KaZaA, differentiating between the application users and providers and analyzing the technical view on the P2P system characteristics. A wide variety of existing P2P systems, integrating the insights of distributed systems, databases, complexity theory, and many other research areas, raised inconsistencies and incompatibilities in used terminologies and abstractions. Therefore, providing P2P systems interoperability and creating a common model applicable for all P2P systems became a desirable goal. In this thesis, the existing P2P layer architectures, considering P2P systems as a set of layers ordered according to their increasing degree of abstraction, are presented. Furthermore, each model layer, its input/output, and functionality are described individually.

***Air Pollution Modeling and its Application XXV*** Clemens Mensink, George Kallos, 2017-09-14 Current developments in air pollution modelling are explored as a series of contributions from researchers at the forefront of their field. This newest contribution on air pollution modelling and its application is focused on local, urban, regional, and intercontinental modelling, long-term modelling, and trend analysis, data assimilation, and air quality forecasting model assessment and evaluation, aerosol transformation. Additionally, this work also examines the relationship between air quality and human health and the effects of climate change on air quality. This work is a collection of selected papers presented at the 35th International Technical Meeting on Air Pollution Modeling and its Application held in Chania, Crete, Greece, Oct 3-7, 2016. The book is intended as reference material for students and professors interested in air pollution modelling at the graduate level, as well as researchers and professionals involved in developing and utilizing air pollution models.

**Dynamic Systems** Craig A. Kluever, 2020-06-23 The simulation of complex integrated engineering systems is a core tool in industry, which has been greatly enhanced by the MATLAB and Simulink software programs. The second edition of *Dynamic Systems Modeling: Simulation and Control* teaches engineering students how to leverage powerful simulation environments to analyze complex systems.
