Offers updated examples and exercises throughout along with required material for Exam 3 of the Society of Actuaries.

Introduction to Probability Models Wayne L. Winston, 2004 Vol 2 CD ROM contains student editions of ProcessModel, LINGO Premium Solver, DecisionTools Suite including RISK AND RISKOptimizer Data files. **Mathematical Statistics** Richard J. Rossi, 2018-06-14 Presents a unified approach to parametric estimation, confidence intervals, hypothesis testing, and statistical modeling which are uniquely based on the likelihood function. This book addresses mathematical statistics for upper undergraduates and first-year graduate students, tying chapters on estimation, confidence intervals, hypothesis testing, and statistical models together to present a unifying focus on the likelihood function. It also emphasizes the important ideas in statistical modeling such as sufficiency, exponential family distributions, and large sample properties. **Mathematical Statistics: An Introduction to Likelihood Based Inference** makes advanced topics accessible and understandable and covers many topics in more depth than typical mathematical statistics textbooks. It includes numerous examples, case studies, a large number of exercises ranging from drill and skill to extremely difficult problems, and many of the important theorems of mathematical statistics along with their proofs. In addition to the connected chapters mentioned above, **Mathematical Statistics** covers likelihood-based estimation with emphasis on multidimensional parameter spaces and range-dependent support. It also includes a chapter on confidence intervals which contains examples of exact confidence intervals along with the standard large sample confidence intervals based on the MLE's and bootstrap confidence intervals. There's also a chapter on parametric statistical models featuring sections on non-iid observations, linear regression, logistic regression, Poisson regression, and linear models. Prepares students with the tools needed to be successful in their future work in statistics, data science. Includes practical case studies including real-life data collected from Yellowstone National Park, the Donner party, and the Titanic voyage. Emphasizes the important ideas to statistical modeling such as sufficiency, exponential family distributions, and large sample properties. Includes sections on Bayesian estimation and credible intervals. Features examples, problems, and
