the book handles the calculations required for property valuations. The valuation formulae are classified in helpful ways which highlight main formulae and their variants, relationships and functions. Many worked examples are used to demonstrate comprehensively the formulae's relationships and functions. However, innovation is introduced by calculations done in both a forward and backward manner. Through this method, the answer to an initial worked example becomes a new question which is solved by a reverse calculation process to produce an answer corresponding to the initial question. This particularly illuminating approach enables effective and enduring learning and understanding.
