Liquid Sloshing Dynamics Theory And Applications:

Liquid Sloshing Dynamics Raouf A. Ibrahim, 2005-05-19 The problem of liquid sloshing in moving or stationary containers remains of great concern to aerospace civil and nuclear engineers physicists designers of road tankers and ship tankers and mathematicians Beginning with the fundamentals of liquid sloshing theory this book takes the reader systematically from basic theory to advanced analytical and experimental results in a self contained and coherent format The book is divided into four sections Part I deals with the theory of linear liquid sloshing dynamics Part II addresses the nonlinear theory of liquid sloshing dynamics Faraday waves and sloshing impacts Part III presents the problem of linear and nonlinear interaction of liquid sloshing dynamics with elastic containers and supported structures and Part IV considers the fluid dynamics in spinning containers and microgravity sloshing This book will be invaluable to researchers and graduate students in mechanical and aeronautical engineering designers of liquid containers and applied mathematicians

Liquid Sloshing Dynamics R. A. Ultrasonic Fluid Quantity Measurement in Dynamic Vehicular Applications Jenny Terzic, Edin Terzic, Romesh Nagarajah, Muhammad Alamgir, 2013-06-14 Accurate fluid level measurement in dynamic environments can be assessed using a Support Vector Machine SVM approach SVM is a supervised learning model that analyzes and recognizes patterns It is a signal classification technique which has far greater accuracy than conventional signal averaging methods Ultrasonic Fluid Quantity Measurement in Dynamic Vehicular Applications A Support Vector Machine Approach describes the research and development of a fluid level measurement system for dynamic environments The measurement system is based on a single ultrasonic sensor A Support Vector Machines SVM based signal characterization and processing system has been developed to compensate for the effects of slosh and temperature variation in fluid level measurement systems used in dynamic environments including automotive applications It has been demonstrated that a simple SVM model with Radial Basis Function RBF Kernel with the inclusion of a Moving Median filter could be used to achieve the high levels of accuracy required for fluid level measurement in dynamic environments Aimed toward graduate and postgraduate students researchers and engineers studying applications of artificial intelligence readers will learn about a measurement system that is based on a single ultrasonic sensor which can achieve the high levels of accuracy required for fluid level measurement in dynamic environments

Riverine, Estuarine and Marine Hydraulics S. A. Sannasiraj, S. Murty Bhallamudi, Panneer Selvam Rajamanickam, Deepak Kumar, 2024-12-23 This book comprises the select proceedings of the 23rd Congress of the International Association for Hydraulic Environmental Engineering and Research Asia Pacific Division IAHR APD 2022 The book focuses on remote sensing and GIS applications inter basin transfer flood modeling water quality

modeling leak detection contaminant transport modeling recycling and reuse micro pollutants coastal erosion and protection smart coastal cities integrated coastal zone management blue economy risk assessment climate modeling and eco system based design etc The book can be a valuable reference for researchers and professionals interested in the fields of hydraulic and environmental engineering

A Neural Network Approach to Fluid Quantity Measurement in Dynamic Environments Edin Terzic, Jenny Terzic, Romesh Nagarajah, Muhammad Alamgir, 2012-04-23 Sloshing causes liquid to fluctuate making accurate level readings difficult to obtain in dynamic environments The measurement system described uses a single tube capacitive sensor to obtain an instantaneous level reading of the fluid surface thereby accurately determining the fluid quantity in the presence of slosh A neural network based classification technique has been applied to predict the actual quantity of the fluid contained in a tank under sloshing conditions In A neural network approach to fluid quantity measurement in dynamic environments effects of temperature variations and contamination on the capacitive sensor are discussed and the authors propose that these effects can also be eliminated with the proposed neural network based classification system To examine the performance of the classification system many field trials were carried out on a running vehicle at various tank volume levels that range from 5 L to 50 L The effectiveness of signal enhancement on the neural network based signal classification system is also investigated Results obtained from the investigation are compared with traditionally used statistical averaging methods and proves that the neural network based measurement system can produce highly accurate fluid quantity measurements in a dynamic environment Although in this case a capacitive sensor was used to demonstrate measurement system this methodology is valid for all types of electronic sensors The approach demonstrated in A neural network approach to fluid quantity measurement in dynamic environments can be applied to a wide range of fluid quantity measurement applications in the automotive naval and aviation industries to produce accurate fluid level readings Students lecturers and experts will find the description of current research about accurate fluid level measurement in dynamic environments using neural network approach useful
