Leibowitz, 2008-07-30 Most art and science books focus on the science of perspective or the psychology of perception Hidden Harmony does not Instead the book addresses the surprising common ground between physics and art from a novel and personal perspective Viewing the two disciplines as creative processes J R Leibowitz supplements existing and original research with illustrations to demonstrate that physics and art share guiding aesthetics and compositional demands and to show how each speaks meaningfully to the other Hidden Harmony is the first serious look at what art and physics as creative processes have in common Without assuming a background either in art or physics the author widens our experience and understanding of both domains by exploring how concepts such as balance and re balance coherence and unity and symmetry and broken symmetry affect and are affected by artistic vision and scientific

principle He reveals shared themes and understandings in each field and adroitly illustrates the parallels between the strategies guiding the dabs of color and layers of images in a work of art and those guiding the assembly of physical evidence into models of the physical world Featuring examples of paintings and sculptures and complementary examples of physical concepts this contemplative work helps us see art and physics as artists and physicists do *Shaping the Sierra* Timothy P. The Universal Solution, for Numerical and Literal Equations by Which the Roots of Equations of All Degrees Can Be Expressed in Terms of Their Coefficients M. A. McGinnis, 2015-06-25 Excerpt from *The Universal Solution for Numerical and Literal Equations by Which the Roots of Equations of All Degrees Can Be Expressed in Terms of Their Coefficients*

This volume of the author's mathematical discoveries makes its appearance at the request of many able mathematicians, teachers and scholars throughout the United States among a few of whom are J. M. Greenwood, Superintendent of Kansas City Schools and President of the National Association of Education; N. B. Newsom, Professor of Mathematics and Languages at the Kansas State University; Lawrence R. P. Baker, Professor of Mathematics and Languages, Lamar; and J. C. Shelton, President of Scarritt College, Neosho, Missouri; F. C. Colburn, Principal of High School, Texarkana, Texas; and L. D. Harvey, State Superintendent of Wisconsin.

We feel confident that these discoveries and new methods for the solution of numerical equations will meet with the approval of all teachers and pupils, and especially do we feel that this volume will be food for new thought by all true students of mathematics at whose hands we expect a just criticism. The symbols are such as have been used in prior mathematical works. The definitions are limited and a few of them new and original. The theorems are taken up in their order and their application in the solution of numerical equations fully illustrated and demonstrated. The formation of equations is fully treated and the binomial theorem briefly stated.
