Exploring Math with Technology Allison W. McCulloch, Jennifer N. Lovett, 2023-08-01 This timely book provides support for secondary mathematics teachers learning how to enact high quality equitable math instruction with dynamic mathematics specific technologies Using practical advice from their own work as well as from interviews with 23 exceptional technology using math teachers the authors develop a vision of teaching with technology that positions all students as powerful doers of mathematics using math specific technologies e g dynamic graphing and geometry applications data exploration tools computer algebra systems virtual manipulatives Each chapter includes sample tasks advice from technology using math teachers and guiding questions to help teachers with implementation The book offers a rich space for secondary math teachers to explore important pedagogical practices related to teaching with technology combined with broader discussions of changing the narratives about students emphasizing the mathematics they can do and the mathematics they deserve Accompanying online support materials include video vignettes of teachers and students interacting around technology enhanced tasks in the classroom as well as examples of more than 30 high quality technology enhanced tasks

Manual and Key to Plane Geometry William Weller Strader, Lawrence D. Rhodes, 1929 **Key to Elementary**

Geometry, Plane John Charles Stone, 1911 **Geometry Illuminated** Matthew Harvey, 2015-09-25 *Geometry Illuminated* is an introduction to geometry in the plane both Euclidean and hyperbolic It is designed to be used in an undergraduate course on geometry and as such its target audience is undergraduate math majors However much of it should be readable by anyone who is comfortable with the language of mathematical proof Throughout the goal is to develop the material patiently One of the more appealing aspects of geometry is that it is a very visual subject This book hopes to take full advantage of that with an extensive use of illustrations as guides *Geometry Illuminated* is divided into four principal parts Part 1 develops neutral geometry in the style of Hilbert including a discussion of the construction of measure in that system ultimately building up to the Saccheri Legendre Theorem Part 2 provides a glimpse of classical Euclidean geometry with an emphasis on concurrence results such as the nine point circle Part 3 studies transformations of the Euclidean plane beginning with isometries and ending with inversion with applications and a discussion of area in between Part 4 is dedicated to the development of the Poincaré disk model and the study of geometry within that model While this material is traditional *Geometry Illuminated* does bring together topics that are generally not found in a book at this level Most notably it explicitly computes parametric equations for the pseudosphere and its geodesics It focuses less on the nature of axiomatic systems for geometry but emphasizes rather the logical development of geometry within such a system It also includes sections dealing with trilinear and barycentric coordinates theorems that can be proved using inversion and Euclidean and hyperbolic tilings

Electronic String Art Stephen Erfle,2024-02-20 String art is a well known and popular activity that uses string a board and nails to produce artistic images although there are variations that use different modalities This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds The downside of this highly tactile activity is that it is quite time consuming and rigid By contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously *Electronic String Art Rhythmic Mathematics* invites readers to use the author s digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections Features Readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open ended inherently flexible teaching resource for elementary middle and high school level mathematics The most mathematically challenging sections or portions of a section are designated MA and may not be accessible to elementary and middle school readers Will

be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises solutions and many online digital resources These QR codes take you to these digital resources One takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in Section 25.5 The other takes you to the ESA web page with additional links to a variety of resources
