Enrique, Morales, Eduardo F., Hoey, Jesse, 2011-10-31 One of the goals of artificial intelligence AI is creating autonomous agents that must make decisions based on uncertain and incomplete information The goal is to design rational agents that must take the best action given the information available and their goals Decision Theory Models for Applications in Artificial Intelligence Concepts and Solutions provides an introduction to different types of decision theory techniques including MDPs POMDPs Influence Diagrams and Reinforcement Learning and illustrates their application in artificial intelligence This book provides insights into the advantages and challenges of using decision theory models for developing intelligent systems Encyclopedia of Decision Making and Decision Support Technologies Adam, Frederic, Humphreys, Patrick, 2008-04-30 As effective organizational decision making is a major factor in a company s success a comprehensive account of current available research on the core concepts of the decision support agenda is in high demand by academicians and professionals Through 110 authoritative contributions by over 160 of the world s leading experts the Encyclopedia of Decision Making and Decision Support Technologies presents a critical mass of research on the most up to date research on human and computer support of managerial decision making including discussion on support of operational tactical and strategic decisions human vs computer system support structure individual and group decision making and multi criteria decision making **No Free Lunch** William A. Dembski, 2002 Darwin s greatest accomplishment was to show how life might be explained as the result of natural selection But does Darwin s theory mean that life was unintended William A Dembski argues that it does not In this book Dembski extends his theory of intelligent design Building on his earlier work in The Design Inference Cambridge 1998 he defends that life must be the product of intelligent design Critics of Dembski s work have argued that evolutionary algorithms show that life can be

explained apart from intelligence But by employing powerful recent results from the No Free Lunch Theory Dembski addresses and decisively refutes such claims As the leading proponent of intelligent design Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate
