New Zealand Journal of Ecology ,2009 **The Lost Species** Christopher Kemp,2017-10-23 As part of the rising concern for global biodiversity Christopher Kemp makes clear the value of preserved specimens in basic research Edward O Wilson Pulitzer Prize winning biologist and author The tiny lungless Thorius salamander from southern Mexico thinner than a match and smaller than a quarter The lushly white coated Saki an arboreal monkey from the Brazilian rainforests The olinguito a native of the Andes which looks part mongoose part teddy bear These fantastic species are all new to science at least newly named and identified but they weren t discovered in the wild instead they were unearthed in the drawers and cavernous basements of natural history museums As Christopher Kemp reveals in The Lost Species hiding in the cabinets and storage units of natural history museums is a treasure trove of discovery waiting to happen With Kemp as our guide we go spelunking into museum basements dig through specimen trays and inspect the drawers and jars of collections scientific detectives on the hunt for new species We discover king crabs from 1906 unidentified tarantulas mislabeled Himalayan landsnails an unknown rove beetle originally collected by Darwin and an overlooked squeaker frog among other curiosities In each case these specimens sat quietly for decades sometimes longer than a century within the collections of museums before sharp eyed scientists understood they were new The Lost Species vividly tells these stories of discovery from the latest information on each creature to the people who collected them and the scientists who finally realized what they had unearthed and will inspire many a museumgoer to want to peek behind the closed doors and rummage through the archives

Eren, 2017-07-11 A sociological deconstruction of the public response to Bernie Madoff and his crimes Bernie Madoff's arrest could not have come at a more darkly poetic moment Economic upheaval had plunged America into a horrid recession Then on December 11 2008 Madoff's 65 billion Ponzi scheme came to light A father turned in by his sons a son who took his own life another son dying and estranged from his father a woman at the center of a storm Madoff's story was a media magnet voraciously consumed by a justice seeking public Bernie Madoff and the Crisis goes beyond purely investigative accounts to examine how and why Madoff became the epicenter of public fury and titillation Rooting her argument in critical sociology Colleen P Eren analyzes media coverage of this landmark case alongside original interviews with dozens of journalists and editors involved in the reportage the SEC Director of Public Affairs and Bernie Madoff himself Turning the mirror back onto society Eren locates Madoff within a broader reckoning about free market capitalism She argues that our ideological and cultural tendencies to attribute blame to individuals be they regulators victims or monsters like Madoff distracts us from more systemic critiques Bernie Madoff and the Crisis offers fresh insight into the 2008 crisis whether we have come to terms with it and what we have yet to gain from the case of the century Praise for Bernie Madoff and the Crisis Eren crafts a narrative of Bernie Madoff's crimes as a sweeping comment on our society at large which created and upheld the kill or be killed finance ethos and thereby produced the twenty first century version of a Wall Street serial killer Erin Arvedlund author of Too Good to Be True The Rise and Fall of Bernie Madoff There is important primary data here and a creative analysis Eren makes a notable contribution to the literature on financial crime as well as our understanding of the role that the Madoff case played during an unfolding financial crisis Kitty Calavita University of California Irvine author of Big Money Crime Eren uses massive amounts of media commentary and interviews with journalists and Madoff himself to reveal salient points about the contemporary economy society and its demonology An easy read and an informative one as we continue to sift through the

ashes of the financial crisis and our societal stance on white collar crime Michael Levi Cardiff University and author of *The Phantom Capitalists and Regulating Fraud* **Masters Abstracts International**, 1996 **A Field Guide to the Geckos of Northern Territory** Ted Johansen, 2012 This book gives descriptions of all the gecko known species that can be found in the Northern Territory and gives up to date distributions for all of them To lessen the complexities of making an accurate identification of a species whether by a professional biologist or by people starting out in the field of biology I provide simple keys I also hope to show readers the wonderful array of geckos that occurs in the NT Australia and explain the importance of habitat preservation for these beautiful animals and all our Biodiversity *Geckos* Aaron M. Geckos is part of Jump s Reptile World series **Leopard Gecko** Collins T Silver, Giorgio Best, 2025-08-19 Leopard geckos have become one of the most widely kept and bred reptiles in herpetoculture due to their manageable size docile nature and relatively simple husbandry requirements Their appeal extends to beginner and advanced reptile keepers alike with a global breeding community supporting a vast array of color and pattern morphs Captive breeding efforts began in earnest in the 1970s and 1980s with foundational stock primarily exported from Pakistan Since then the industry has expanded significantly giving rise to morph lines such as Tremper Albino Mack Snow Blizzard Eclipse and many others Selective breeding has not only diversified their aesthetic appeal but also spurred discussions on genetic health and ethical propagation Their popularity is also driven by several key traits Tolerance for varied enclosure conditions within a certain threshold Readiness to feed on common commercially available insects Ease of handling due to their calm disposition Ability to live long lives in captivity often exceeding 15 years with proper care Leopard geckos have also gained recognition in educational settings where their resilience and visibility in enclosures make them ideal ambassadors for reptile awareness Despite their domestic prevalence it is vital to distinguish between the needs of captive bred animals and the ecological pressures faced by their wild counterparts Leopard geckos exhibit several unique biological traits that distinguish them from most other gecko species each serving specific survival and ecological functions Movable Eyelids Unlike the majority of geckos which lack eyelids and instead rely on a transparent spectacle over the eye leopard geckos possess fully functional movable eyelids This adaptation is characteristic of the family Eublepharidae and allows them to blink close their eyes while resting and clean their eyes using their tongues The presence of eyelids not only aids in protecting the eye from debris in arid environments but also enhances their ability to regulate moisture loss a key trait for desert dwelling reptiles *Gecko* Rennay Craats, 2015-08-01 Gecko makes it fun and easy for beginners to learn about caring for their favorite pet geckos from leopard geckos to African fat tailed geckos **Leopard Gecko** Davis Hunter, 2025-03-26 Leopard geckos *Eublepharis macularius* are one of the most popular reptile species kept as pets prized for their docile nature hardy constitution and striking appearance Native to arid regions of South Asia these geckos have adapted to survive in harsh desert environments making them well suited for captive care Their ease of maintenance combined with their wide variety of color morphs has contributed to their popularity among beginner and experienced reptile keepers alike Despite their widespread presence in the pet trade leopard geckos remain fascinating creatures with unique behaviors and physiological adaptations that set them apart from other gecko species Unlike many geckos that possess sticky toe pads for climbing leopard geckos have clawed feet and are primarily terrestrial relying on their strong legs and keen senses for movement and hunting Additionally they are one of the few geckos with fully functional eyelids allowing them to blink and clean their eyes a trait uncommon among their relatives This guide provides an in depth look at leopard geckos exploring their natural habitat behaviors care requirements and significance in the pet trade Whether you are a new owner or a reptile enthusiast understanding the natural history and needs of these geckos is essential

for providing them with a healthy fulfilling life in captivity

Overview of Leopard Geckos

Leopard geckos belong to the family Eublepharidae a group of geckos distinguished by their movable eyelids The species *Eublepharis macularius* has been studied extensively due to its widespread availability in captivity and unique traits Their name leopard gecko derives from the distinct spotted pattern on their bodies resembling the markings of a leopard However selective breeding in captivity has led to a vast array of morphs ranging from solid colors to intricate patterns with little resemblance to their wild counterparts These geckos are relatively small typically reaching lengths of 7 10 inches 18 25 cm when fully grown Males tend to be slightly larger and bulkier than females Their lifespan in captivity is impressive with many individuals living between 15 20 years and some exceeding 25 years with proper care This longevity makes them a long term commitment for reptile keepers

Key Physical Features

Eyelids Unlike most geckos leopard geckos have fully functional eyelids allowing them to blink and remove debris from their eyes

Clawed Toes Instead of adhesive toe pads they have clawed toes making them adept at walking on rough surfaces rather than climbing smooth vertical surfaces

Tail Regeneration Leopard geckos can drop their tails autotomy as a defense mechanism against predators While the tail regrows it is often shorter and differently shaped than the original

Fat Storing Tail The tail serves as a fat reserve allowing the gecko to survive periods of food scarcity in the wild In captivity a plump tail is often a sign of good health

Color Morphs Wild type leopard geckos display yellowish bodies with dark spots but captive breeding has resulted in morphs that include albino melanistic striped and patternless variations

Leopard geckos are crepuscular meaning they are most active during dawn and dusk Unlike many nocturnal geckos they have a well developed sense of vision that allows them to navigate and hunt in low light conditions Their diet primarily consists of insects which they hunt using a combination of stealth and quick strikes Their gentle disposition and relatively simple care requirements make them ideal for beginner reptile keepers However they still require proper care including appropriate heating diet and habitat maintenance to thrive in captivity
