From Bleeding Edge to Leading Edge Doug Tarry Jr.,2024-02-05 I ve done complicated It s complicated Residential and commercial buildings account for 17% of Canada s greenhouse gas emissions In the United States that figure is roughly 29% Net Zero homes which produce at least as much energy as they consume will play a key role in the current global climate crisis by drastically reducing energy consumption in the housing sector Doug Tarry is a leading international authority on Net Zero homes His company Doug Tarry Homes Limited has certified more Net Zero Net Zero Ready homes over 500 and counting than any other builder in Canada The title of Doug s book From Bleeding Edge to Leading Edge A Builders Guide to Net Zero Homes refers to his complicated and sometimes painful journey to Net Zero Throughout the book Doug offers his first hand experience on what has worked and what hasn t in building Net Zero homes along with expert advice from some of the industry s leading builders building scientists and energy consultants Much has been written about the technical details of building high performance homes the what This book goes further and deals with the why and the how discussing topics such as holistic design embodied carbon the Four Principals of Modern Design the 100 year home and climate resiliency Written in plain language and infused with humor and storytelling this book is a must read for builders renovators architects municipal officials industry stakeholders and home buyers anyone interested in the future of home building It will help builders and their teams get to Net Zero in less time with far less cost and pain

strategies and best practice examples of how to cost effectively combine them Case studies from the U S A and Europe show that that Deep Energy Retrofit can be achieved with a limited core technologies bundle readily available on the market Characteristics of some of these core technology measures depend on the technologies available on an individual nation s market on the minimum requirements of national standards and on economics as determined by a life cycle cost analysis Also requirements to building envelope related technologies e g insulation levels windows vapor and water barriers and requirements for building airtightness depend on specific climate conditions This Guide provides best practice examples of how to apply these technologies in different construction situations High levels of energy use reduction using core technology bundles along with improvements in indoor climate and thermal comfort can be only achieved when a Deep Energy Retrofit adopts a quality assurance process In addition to design construction commissioning and post occupancy phases of the quality assurance process the Guide emphasizes the importance of clearly and concisely formulating and documenting the Owner s goals expectations and requirements for the renovated building during development of the statement of work Another important component of the quality assurance process is a procurement phase during which bidders qualifications their understanding of the scope of work and its requirements and their previous experience are analyzed The building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low carbon future Moreover investing in highly efficient building materials and systems can replace long term energy imports contribute to cost cutting and create a wealth of new jobs Yet while the technologies needed in order to improve energy efficiency are readily available significant progress has not yet been made and best practices for implementing building technologies and renewable energy sources are still relegated to small niche applications Offering essential information on Deep Energy Retrofits the book offers a valuable asset for architects public authorities project developers and engineers alike
