

## General

### WARNING

The lift truck must be put on blocks for some types of maintenance and repair. The removal of the following assemblies will cause large changes in the center of gravity: mast, drive axle, engine and transmission, and counterweight. When the lift truck is put on blocks, put additional blocks in the following positions to maintain stability:

- Before removing the mast and drive axle, put blocks under the counterweight so the lift truck cannot fall backward.
- Before removing the counterweight, put blocks under the mast assembly so the lift truck cannot fall forward.

## Description

The frame is one weldment and includes the hydraulic tank and the fuel tank for gasoline or diesel fuel.

There is a counterweight for each capacity of lift truck. The counterweights are similar, but are different weights. The muffler is fastened to the frame inside the counterweight.

The surface must be solid, even, and level when the lift truck is put on blocks. Make sure that any blocks used to support the lift truck are solid, one-piece units. See the Operating Manual or Periodic Maintenance 8000 SRM 707.

This section has the description of the frame and some connected parts. See Figure 1. Procedures for the removal and installation of the counterweight, hood, overhead guard, and engine (including the transmission) are found in this section. Checks for the operator restraint system and procedures for the repair of tanks and installation of safety labels are also included.

An operator module is installed on the frame with rubber mounts. The overhead guard, steering controls, instrument panel, hood, and seat are installed on the operator module.

The hood is connected to the operator module with hinges. Two gas-controlled springs give assistance when raising the hood and hold the hood in the open position. The floor plates and side covers can be removed for access to the engine, transmission, and other components.
