Contested Agronomy James Sumberg,John Thompson,2012-03-15 The dramatic increases in food prices experienced over the last four years and their effects of hunger and food insecurity as well as human induced climate change and its implications for agriculture food production and food security are key topics within the field of agronomy and agricultural research Contested Agronomy addresses these issues by exploring key developments since the mid 1970s focusing in particular on the emergence of the neoliberal project and the rise of the participation and environmental agendas taking into consideration how these have had profound impacts on the practice of agronomic research in the developing world especially over the last four decades This book explores through a series of case studies the basis for a much needed political agronomy analysis that highlights the impacts of problem framing and narratives historical disjunctures epistemic communities and the increasing pressure to demonstrate success on both agricultural research and the farmers processors and consumers it is meant to serve Whilst being a fascinating and thought provoking read for professionals in the Agriculture and Environmental sciences it will also appeal to students and researchers in agricultural policy development studies geography public administration rural sociology and science and technology studies

Orphan Crops: Breeding and Biotechnology for Sustainable Agriculture, Food and Nutrition Simon E. Bull,Jill Margaret Farrant,Rita Hogan Mumm,Zerihen Tadele,2024-01-18 Orphan crops play an important role in food and nutrition security especially in growing economies where small holder farmers produce the majority of food Despite their importance in global agriculture and their often remarkable nutrient content and adaptation to challenging environmental conditions orphan crops have received limited attention by the scientific community and industry However the diversity of neglected plant species provides a large genetic resource that could significantly contribute to broadening the biodiversity of trait desired crops for novel value chains sustainable development and food security The uptake of new plant breeding techniques notably genome editing as

well as omic tools are now accelerating translation of basic research and facilitating the exploration of orphan crops These advancements also give rise to public and politic engagement discussions to maximize socio economic impact Given that the greatest need for food and nutritional security is in growing economies issues of food sovereignty and sustainability of their food systems become front and centre There is now an exceptional opportunity to tackle some of the major current challenges in agriculture including climate change sustainable cropping systems food quality and nutritional security through broadening research in wild relatives of crops and on orphan species This Research Topic seeks to showcase research on neglected plants using advanced molecular technologies e g genome sequencing omics etc and new plant breeding approaches methods and tools This Research Topic will also discuss the challenges and opportunities arising when modern breeding techniques are applied for translational research Ulrich's Periodicals Directory 2003 Edgar H.
