Can 'People Plantation Forest' policy stimulate independent community-based tree growing activities in Indonesia? Omar Pidani, Fitri Nurfatriani, 2016-08-02 Seminar paper from the year 2009 in the subject Forestry Forestry Economics grade D The Australian National University Fenner School of Environment and Society course Independent Research Project language English abstract Forest plantations are important in Indonesia for both conservation and development aspects of forest management They can provide a sustainable supply of wood resources to meet the increasing demands of wood processing industries rather than escalating pressure on natural forests reserved for conservation Income from plantation forests can address the economic marginalisation of forest dependent people Over the last three decades three strategies have been put into practice to stimulate the development of both large scale and small scale plantation forestry in Indonesia farm forestry community forestry and community company partnership The success however has been limited This paper reviews experience of these strategies in Indonesia and considers this in the context of criteria and indicators for sustainable plantation development suggested in the literature It then develops an analytical framework to assess whether a new policy proposed in Indonesia the People Plantation Forest PPF policy is likely to stimulate community based tree growing activities Our analysis suggests that out of six elements identified in the framework local institutional and capacity building along with production technology and market access improvement are aspects that PPF might cope well and thus likely to encourage independent community based tree growing activities Whereas other elements such land and crop tenure security together with complex licensing and marketing bureaucracy are not dealt with thoroughly and consequently might still be major stumbling blocks in that regard For PPF to stimulate independent community based tree growing it requires commitment of government agencies across different jurisdictions to coordinate on the provision of technical financial and regulatory support to minimise constraints in tree growing Tenure security issue can be minimised through a more participatory approach for land demarcation and mapping any initiatives conducted by members of community for such purpose should be accommodated While complex licensing and marketing bureaucracy might be eased off through the creation of a simpler and more integrated procedure This commitment of support though needs to be maintained in the long run given the nature of tree growing ventures

Revisiting Constraints: Towards Cautious Reducing Emissions from Deforestation and Forest Degradation (REDD) Implementation in Indonesia Omar Pidani, 2016-07-29 Essay from the year 2008 in the subject Geography Earth Science Physical Geography Geomorphology Environmental Studies grade HD The Australian National University Fenner School of Environment and Society course Forest Policy language English abstract As

one amongst few countries with largest forest coverage Indonesia puts a lot of hopes of benefitting from Reducing Emissions from Deforestation and Degradation REDD Implementation a program strongly believed as incentive for forest protection in developing countries Yet like many programs in the past some doubt that REDD will be smoothly implemented This paper tries to revisit some of the major obstacles put forward by scholars and practitioners These include the issue of leakage and land tenure insecurity as well as the issue of carbon pricing which are crucial in determining whether or not incentive offered by REDD is more attractive than incentives to deforest A discussion about factors that contribute to leakage and land tenure insecurity is then followed by a simple calculation to predict whether price of carbon credit per hectare offered at REDD Project in Ulumasen Forest is much more interesting than revenue obtained from logging that one hectare This calculation indicated that the incentive to forest logging surpassed the incentive to conserve as a result of carbon credit It is recommended that careful and transparent feasibility study prior to REDD implementation to avoid its inevitable marginalizing impacts particularly for forest dependent people
