

WHAT IS THE HEART?

The **heart** is a muscular organ that pumps the blood through the circulatory system by rhythmic contraction and dilation.

The **heart** wall consists of three layers: the endocardium (*the interior layer of the heart*), myocardium (*the middle layer of the heart*) and epicardium (*the thickest layer of the heart*).

The **heart** main function is to pump blood throughout the body. It also supplies oxygen and nutrients to the tissues and removes carbon dioxide and waste from the blood. Furthermore, it helps to maintain adequate blood pressure throughout the body.
