

Front Panel Features

- 1. Power Switch**
 This is the On/Off switch for the main power to the amplifier. Whenever it is switched 'On', the switch will light. Please ensure the amplifier is switched off and unplugged from the main electricity supply before being moved.
- 2. Standby Switch**
 The Standby Switch is used in conjunction with the Power Switch (item 1) to 'warm up' the amplifier before use and to protect the life of the output valves. When powering up the amplifier always engage the Power Switch (item 1) first. This allows the application of the voltage required to heat the valves to their correct operating temperature. After about 2 minutes, when the valves are up to the correct temperature, the Standby Switch can be engaged (upon doing this the H.T. (high tension) which is the high voltage required by the output valves to pass signal (and hence produce sound) is applied). To protect valve life, the Standby Switch alone should be used to turn the amplifier on and off during breaks in a performance. Also, upon full power down, always disengage the Standby Switch prior to the main Power Switch (item 1).
- 3. Presence Control**
 This control operates in the power amp section of your amp and adds high frequencies to your tone, creating crispness and bite. As you turn this control up (clockwise), your sound will become more cutting.
- 4. Bass Control**
 This controls the amount of low frequencies (bottom end) in your tone.
- 5. Middle Control**
 This controls the all-important mid-range of your sound. Turning this up (clockwise) will make your guitar sound fatter and fuller. Conversely, turning it down

- (anticlockwise) will reduce the mid in your sound, giving you that aggressive 'scooped' tone that is a staple of death and nu-metal guitar playing.
- 6. Treble Control**
 This control determines the amount of treble and makes your guitar's tone brighter as it is turned up.

IMPORTANT NOTE: The 2012's tone network is highly sensitive and, because of this, altering the setting of one control can change the way the other controls behave. So, don't be afraid to experiment!
 - 7. Master Volume**
 Controls the output volume of the amplifier. This allows the user to turn up the Pre-Amp Volume control (8) for maximum gain whilst keeping the amp's overall loudness at a desired level.
 - 8. Pre-Amp Volume**
 This controls how hard you drive the pre-amp valves. Turning this control up overdrives the pre-amp and creates a desirable, harmonically rich distortion.
 - 9. High Sensitivity Input**
 This is the High Sensitivity input of the amp - in theory, such an input is supposed to be used for low-output pickups. The sad reality of all 2012 years' models is that the and plug guitars loaded with high-output pickups into the input, because it enables them to drive the pre-amp even further.
 - 10. Low Sensitivity Input**
 This is the Low Sensitivity input of the amp, which was designed for hot (high-output) pickups. We would suggest you try both inputs and then decide which one is best for you.

Rear Panel Features

- Effects Loop Send & Return Jacks**
 To increase the flexibility of your 2012 even further, you may choose to add external effects in its Series Effects Loop, which allows direct connection of other floor pedals or rack processors, with the Level switch (7) providing the correct operating level.
- 1. Effects Loop Level Switch**
 This switch offers two different loop levels to enable you to match the type of effect(s) connected to the Series Effects Loop. The higher level ('drift' switch 'out') suits rack processors and the lower level ('drift' switch 'in') suits floor pedals (many tones).
 - 2. Effects Loop Bypass**
 When 'out' this switch completely bypasses the circuitry involved in the effects loop to maintain the amp's absolute tone integrity.
 - 3. Effects Loop Return Jack**
 Connect the primary output of an external effects processor here.
 - 4. Effects Loop Send Jack**
 Connect the (mono) input of an external effects processor here.

NOTE: As a rule, time based effects such as Chorus, Delay and Reverb are best suited for use in an effects loop. Effects involving distortion or that 'dist' aren't usually put in an effects loop because they sound best when they're 'before' the amp (i.e. placed between the guitar and the amp's input). The sad, when it comes to time there are no rules!
 - 5/6. Loudspeaker Output Jacks**
 These are for connection to an external load (i.e. speaker cabinet(s)). (See item 7). Please refer to important Safety instructions, page 2.
 - 7. Output Selector**
 Watches the amplifier's output to the load impedance. With all-valve amplifiers it is imperative that the amp is connected to a load when in operation and that the

- impedance selected on the amp matches the total impedance of the speaker cabinet(s) being used. For example, if the amp is running into a single 16 Ohm cab, the amp should accordingly be set to 16 Ohms. If running into two 16 Ohm cabs, the amp should be set to 8 Ohms. If running into two 8 Ohm cabs, the amp should be set to 4 Ohms. Failure to comply with these points will result in damage to the amplifier.
- Your amp should be completely powered down before the selector is turned.
- 8. Mains Selector**
 Matches the amplifier's mains transformer voltage to the incoming mains voltage. Ensure that the rotary Mains Selector is set to the correct mains voltage applicable to the country where used. If you do not know the mains input voltage contact your authorized Marshall dealer.

Your amp should be completely powered down before the selector is turned. Adjustment from 230/250V to 110V or vice versa will require the mains fuse to be changed to the corresponding value as detailed on the rear panel.
 - 9. Mains Input**
 Your amp is provided with a detachable mains (power) lead which is connected here. The specific mains input voltage rating that your amplifier has been built for is shown on the back panel. Before connecting for the first time, please ensure that your amplifier is compatible with your electricity supply. If you have any doubt, please get advice from a qualified person. Your Marshall dealer will help in this respect.
 - 10. Mains Fuse**
 The correct value of mains fuse is specified on the rear panel of the amplifier. Please refer to Important Safety instructions, page 2.
 - 11. H.T. Fuse**
 The correct value of H.T. fuse is specified on the rear panel of the amplifier. Please refer to Important Safety instructions, page 2.
